TITLE Career Education: Learning with a Purpose. Junior High/Secondary Guide.

INSTITUTION State Fair Community Coll., Sedalia, Mo.

SPONS AGENCY Office of Education (DHEW), Washington, D.C.

PUB DATE [76]

NOTE 271p.; Not available in hard copy due to marginal reproducibility of original document

EDRS PRICE MF-\$0.83 Plus Postage. HC Not Available from EDRS.

DESCRIPTORS Business Education; Career Awareness; *Career Education; Curriculum Guides; English Curriculum; *High School Curriculum; Home Economics Education; Instructional Materials; Junior High Schools; *Learning Activities; Mass Media; Mathematics Curriculum; Music Education; Resource Materials; Science Units; Secondary Education; Social Studies Units; Student Projects; *Units of Study (Subject Fields)

IDENTIFIERS *Career Education Project

ABSTRACT

Designed to supplement the existing curriculum at the junior high (grades 7-9) and secondary (grades 10-12) levels, this curriculum guide contains curriculum units to be used as models for fusing career education into the following areas: English, mathematics, science, and social studies (junior high); business, communications, French, home economics, mathematics, music, science, and social studies (secondary). Each teacher-developed unit is presented under the headings of objectives, procedures, resources and materials, evaluation, and comments on use. A listing of field trip sites and guest speakers for the Sedalia, Missouri area is appended. (TA)

* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

FORWARD

Career Education attempts to help students understand the work ethics imposed by society; develops their work values based on their own personal interests in full awareness of society's demands; helps them become aware of the world of work and its values, prepares for, and ultimately begins and pursues a career, including the possibility of occupational change and the hope for productive use of leisure during that career.

"Career" itself is a confusing term. To us, it refers to the sum total of all the work done by a person in his lifetime. It differs from an occupation in that an occupation is a component of a career at a point in time.

As there is no set definition of Career Education, these materials have been prepared around the concept as it was conceived by these individuals in relation to the three general career education goals set up by the workshop participants.

They are:

For the student

- (1) to develop an awareness of who she/he is and through effective decision-making what she/he can become;
- (2) to become aware of the interrelationships of society with his/her school, community, family, work, and leisure;
- (3) to become aware of the many facets of the world of work.

All objectives, goals and activities included in this guide were developed in relation to these general goals.

The activities which follow are offered as suggestions for supplementing activities in career education programs. This guide's purpose is not to tell the individual instructor what he or she must do. Rather the guide simply offers an example of what the teacher might do.

As you peruse the materials, take time to look at all activities rather than just your subject area. Many can be modified slightly and fit various situations.

Judy Rae Kuhlman
Observation/Exploration Specialist
Career Education Project
State Fair Community College
Sedalia, MO 65301

Subject Area(s) Language Arts

Unit(s) Reading - Leisure and Recreational

Objective(s): The student will become familiar with various awards presented to authors. The student will understand the procedure involved in writing and publishing of manuscripts. The student will read an award winning book.

Procedure:

Teacher presents information about the various awards presented to authors of juvenile books: Newbery Award, Mark Twain Award, etc.

Teacher presents copies of the award winning books in the school library.

Students have the opportunity to read the books.

Students view "The Story of a Book," or other suitable film dealing with production of a book.

Guest speaker - a writer in the local area.

Students have opportunity for questions and answers with the guest speaker.

Follow-up class discussion of the career related fields, as illustrator, promotional agents, book sales, etc.

Students do a project of their own design as a follow-up to reading a book. This could be a bulletin board, an oral report, a puzzle, a diorama, etc.

Resources and Materials:

School library

Evaluation: Teacher checks and grades follow-up projects.

Comments on use:

Objective(s): The student will become acquainted with a classic short story and become familiar with the characters in Dickens' "A Christmas Carol."

Procedure:

Read Charles Dickens' "A Christmas Carol."

Discuss each stage for comprehension.

Discuss the background information about Dickens and events surrounding his writing of the story.

Write a composition on one of the following topics:

- a. People can carry the spirit of Christmas goodwill with them all through the year.
- b. Working conditions have greatly improved since the days of Bob Cratchit.

Resources and Materials:

An anthology containing Dickens' "A Christmas Carol"

Evaluation: Students discuss and share their ideas on the above topics with the class. Teacher checks compositions for spelling, punctuation, grammar, sentence structure, etc.

Comments on Use:

Objective(s): The student will become familiar with Washington Irving's "Legend of Sleepy Hollow." The student will understand the importance of character development in a short story. The student will become familiar with the biographical background of an American writer.

Procedure:

Read Washington Irving's "Legend of Sleepy Hollow."

Discuss the story for comprehension, with emphasis on the character development.

Discuss the character traits of Ichabod Crane and Brom Bones. Compare and contrast these two men.

Discuss Ichabod's ambition to be a wealthy land owner. Encourage the class to decide if he would have been a successful land owner. (why/why not)

Students role play one of the following scenes:

- a. Ichabod in his classroom
- b. Ichabod riding to Van Tassel's party
- c. Ichabod feasting at the Van Tassel table
- d. Brom Bones watching Ichabod dancing with Katrina
- e. Ichabod listening to the old wives tales told at the party
- f. Ichabod, being pursued by the Headless Horseman
- g. Brom, hurling the pumpkin at the fleeing Ichabod

Students write a composition on the following topic sentence:

I would/would not have liked to be a student in Ichabod's class.

Students cooperate to compile two lists of reasons (would/would not) want to be a student in Ichabod's class. Filmstrip: "Irving to Sunnyside."

Resources and Materials:

Adventures for Readers, Harcourt Brace, or other anthology containing the selection

Evaluation: Teacher checks and grades the compositions written by the students.

Comments on use:

Objective(s): The student will learn how to participate in a panel discussion.

Procedure:

Present the methods and guidelines for participation in panel discussions.

Divide students into career interest groups.

Allow time for students to research their career interest in the library.

Present each panel discussion for the class, after time has been given for preparation of the panel by the students.

Resources and Materials:

Warriners, English Grammar and Composition, Harcourt, Brace, Chapter 24

School library

Evaluation: Class evaluates each panel by use of a check-off sheet prepared by the teacher. This is a listening exercise.

Comments on use:

Objective(s): Students will become aware of traits, qualities, and characteristics that can contribute to success in his life and other persons.

Procedure:

Read a biography or autobiography or cuttings from several biographies or autobiographies.

Class discussion of readings with the sharing of traits and qualities found.

Interview a person in the community that the students regard as successful and why he is successful.

Write a composition either about the qualities for success or the qualities and traits found in the interviewed person that makes him successful.

Resources and Materials:

Adventures in Reading, by
Harcourt, Brace, and World

Patterns in Literature, Holt,
Rinehart, and Winston

Resource person in community

Library

From We, From Alone

Evaluation: Share compositions with class. Compositions checked by teacher for punctuation, spelling, etc.

Comments on use:

Objective(s): Students will have general knowledge and understanding of the blind's world and occupations available.

Procedure:

Read Helen Keller by Van Wych Brooks and The World at My Fingertips by Karsten Ohnstead.

Discussion of stories and problems blind may encounter in the world. Examine braille books.

Invite blind person in community as a guest speaker with emphasis on what he encounters and occupations to blind people.

Question and answer period with guest speaker.

Follow-up discussion the next day.

Write a poem or short story on blindness.

Read The Miracle Worker (Drama).

Group skits on being blind.

Resources and Materials:

Adventures for Readers

Adventures in Reading

School and public library.

Braille books

Guest speaker and his equipment

Local club for handicapped persons

Themes in Literature, p. 314

Evaluation: Sharing of poems and themes in class. Class discussion.

Comments on use: Children have much empathy for guest speaker and are amazed at all the equipment available to the blind.

Objective(s): Students will have general knowledge of the purpose of parts of speech and their uses in language.

Procedure:

Teacher introduces a blueprint to class.

Discussion of purpose of blueprint.

Discussion of professions that use blueprints.

Relationship of words to writers as blueprints to architects (analogy).

Show sentence diagrams and places for parts of speech on diagram.

Resources and Materials:

Blueprint of building, etc.

Examples of sentence diagram.
Skeletal diagrams on overhead and chalkboard.

Evaluation: Class discussion and students see the parts of speech in language.

Comments on use: Students become more aware of uses and applications of parts of speech.

Mary Lynn Fillinger
Dorothy England
Delta Russell

Subject Area(s) Language Arts

Unit(s) Writing--Completing Business Forms

Objective(s): The student will be familiar with employment application forms and terminology used on the forms.

Procedure:

Teach correct procedure for completing application forms.

Show students what is needed at hand for completing forms: social security number, names and addresses of references, etc.

Present sample applications and go through one as a group, explaining terminology on the forms.

Student completes application form individually.

Ask a local personnel director to speak to the class regarding importance of the application forms; points employers look for, such as neatness, completion, accuracy; etc.

Question and answer session with speaker.

Follow-up discussion by the class concerning their applications, problems they had in completing forms, etc.

Resources and Materials:

Sample forms and resources from SFCC Career Education Library

Local personnel director

Evaluation: Teacher checks forms for neatness, correctness, and completeness.

Comments on use:

Subject Area(s) English

Unit(s) Speaking - personal interview

Objective(s): Student will become aware of the necessary information and procedure used in personal interviews.

Procedure:

Present to class necessary information available for personal interview, also, correct manners and grooming.

Follow-up discussion.

Have personnel director from local industry come and speak on the procedure used in personal interviews and give tips to students.

Class (role-play) interview classmates.

Have two or three local businessmen come and interview with students observing businessman's checksheet.

Resources and Materials:

State Fair Community College
Career Education Library

Local personnel director.

Evaluation: Businessman fills out checksheet on interview he gives students. Students complete checksheets on role playing for each other.

Comments on use:

Objective(s): The student will learn the correct form for a business letter. The student will learn to fold a letter and address envelopes correctly.

Procedure:

Teach the six parts of a business letter.

Teach the information needed in a letter of inquiry.

Write a letter of inquiry for a summer job to a business or industry where the student would like to be employed.

Teach the correct way to fold the letter and address the envelope.

Fold the letter and address the envelope.

Resources and Materials:

Harcourt, Brace, English Grammar and Composition, and transparencies

Basic Language, Messages and Meaning, II, III, IV

Language for Daily Use, Harcourt, Brace, and World, p. 210-213

Evaluation: Teacher checks the letter for correct form, grammar, punctuation, and necessary information included in body. Teacher checks for correct folding of letter and addressing of envelope.

Comments on use:

Subject Area(s) English

Unit(s) Oral Speaking

Objective(s): The student will become acquainted with a career in which he is interested and will receive practice in giving an oral presentation to improve his public speaking.

Procedure:

Present the methods and guidelines in preparing and giving oral presentations.

Discussion of different careers with each student choosing a career of interest.

Students interview a person in the area of their career or their interest area.

Preparation of speech from personal interview and research in library.

Presentation of speech.

Have class evaluate students in listening exercise using a prepared evaluation check-off sheet.

Resources and Materials:

Language for Daily Use, Harcourt, Brace and World, Unit 2: Speaking, Expressing Ideas

Basic Language Messages and Meanings, Chapter 4

Evaluation: Student evaluation sheets and discussion following speeches.

Comments on use:

Subject Area(s) English

Unit(s) Language Arts (Interpretations)

Objective(s): The student will be able to differentiate between a straight factual news story and an opinionated editorial.

Procedure:

Discuss elements that comprise a straight news story.

Students will locate examples of news stories in newspapers on front page.

Students identify the elements of a news story (who, what, when, why, and how).

Discuss inverted pyramid style of journalistic writing.

Teacher presents the elements and purposes of editorials (inform, educate, argue, entertains).

Students locate an editorial that relates to a straight news story.

Students examine editorial for elements and purpose.

Students compare the editorial to the straight news story and separate fact from opinion.

Student takes a selected news story and writes an editorial on the story.

Students share with their editorials with the class and compare opinions.

Resources and Materials:

Daily newspaper

Evaluation: Teacher reads and evaluates the student written editorial.

Comments on use:

Subject Area(s) Mathematics

Unit(s) Advertising

Objective(s): To help students recognize the deception that is used in advertising.

Procedure:

Have students bring magazine advertisements that are well-known today.

Discuss the different techniques used in advertising to capture the public's attention.

Example: Use of a famous name to endorse
a product
Generalities
Misuse of polls
Bandwagon

Resources and Materials:

Typical Gyps and Frauds by
Changing Times Education

Magazines

Evaluation: Have students decide if certain magazine advertisements are as truthful as they appear.

Comments on use: Television advertisements are also very helpful to use in addition to magazines.

Subject Area(s) Mathematics

Unit(s) Percents and Decimals

Objective(s): Students can see how percentage is used in everyday situations.

Procedure:

Have a lesson on percent and decimal equivalents and on changing a percent to a decimal.

After students are familiar with the above problem, have them bring newspaper cutouts of a sale where items are a certain percent off the cost. Using these as problems, let students find the reduced price of the item.

Resources and Materials:

Newspapers

Evaluation: Give the students problems to see if they understand the use of percentage and how to find a percent of a number.

Comments on use:

Subject Area(s) Mathematics

Unit(s) Metrics

Objective(s): Students will become familiar with using metric measuring instruments. The student will gain experience in converting to different units.

Procedure:

Have students measure different items measured for a discussion lesson later. They could also measure the item in meters, centimeters, or in millimeters.

Students could tape a metric stick to the wall to use for measuring the height of the students in class.

Resources and Materials:

Classroom items

Masking tape

Meter rulers

Meter sticks

Evaluation: Check the accuracy of the information given on student worksheets.

Comments on use:

Subject Area(s) Mathematics

Unit(s) Metrics

Objective(s): To give a history of the metric system and why it is important for the United States to go metric.

Procedure:

Discuss the importance of learning the Latin and Greek prefixes before beginning actually working with metrics.

Compare the number of nations using the metric system with those using our system.

Discuss trade with those nations on the metric system and confusion of conversion. Consider the extra time and manpower used to convert these measures.

Resources and Materials:

"Metrication for America"--
filmstrip

Evaluation: Use this film series as an introduction to the beginning of a metric lesson.

Comments on use:

Objective(s): To give students an understanding of plane figures. To give an understanding of the terminology used in geometry. (An opportunity to use square units and cubic units.)

Procedure:

Discuss the following polygons:

- | | |
|------------------|--------------|
| 1. square | 5. trapezoid |
| 2. parallelogram | 6. pentagon |
| 3. rectangle | 7. hexagon |
| 4. triangle | 8. octagon |

Name the following figures.

1. front door
2. pastry board
3. baseball diamond
4. high school pennant
5. highway stop sign
6. a kit
7. gable end of a house
8. wheel of an automobile
9. diamond-shaped panes in church windows
10. gear wheels of a bicycle

Resources and Materials:

Classroom examples of geometric shapes

Geometric shapes or cutouts

Evaluation: Oral evaluation of the above terms.

Comments on use: Additional geometric terms could be introduced besides those given above. Example: circle, circumference, diameter, radius, pi, etc.

Objective(s): To reinforce and extend basic ideas and skills related to measuring length as it applies to finding the perimeter and area of polygons.

Procedure:

Have students find the area of the following polygons using practical situations as given below:

1. Rectangles and square--painting walls, ceilings, floors, replacing glass window panes, making curtains, photographs.
2. Parallelograms--sections of building with modern architectural design.
3. Trapezoid--tents, gables, lamp shades, sheet metal castings for machinery and tools.
4. Triangles--pennants, surfaces of triangular prisms, wings of model rockets.

Resources and Materials:

Cardboard models

Prisms

Classroom:

windows
walls
desks
tiles in floor
ceiling

Evaluation: Grade the worksheet to evaluate the student's ability to use the formulas correctly for finding areas.

Comments on use:

Objective(s): The purpose of this unit is to present the concepts and formulas for finding surface area and volume of prisms, cones, cylinders, pyramids and rectangular solids.

Procedure:

Discussion of concepts on volume and surface area.

Student copy of formulas needed.

Practical application problems that might be used.

1. How many cubic feet does a block of ice 4' x 3" x 8" contain? (surface area also).
2. How much ice cream can be packed into a cone 2" in diameter and $3\frac{1}{4}$ " deep?
3. How many cubic feet of air are there in a cone-shaped tent 20" diameter and 9' high?
4. How many cubic feet of dirt must be removed to make a cylindrical cistern 4' in diameter and 12' deep?
5. A stone pyramid has a rectangular base 15' by 12' and is 15' high. How many cubic feet does it contain?

Resources and Materials:

Set of cubic blocks

Rectangular solids

Cylinders

Triangular prism

A cone

Rectangular pyramid

Evaluation:

Comments on use: The surface area of the above items can also be found. Also in this unit could be introduced the following: cube and sphere.

Objective(s): The students will be able to describe the process used in industries for the production a common material found in the student's environment. The student will be able to write a letter of inquiry requesting materials. The student will be able to describe simple chemical reactions.

Procedure:

The students will list as many materials as they can that requires chemical reactions in their production.

The students will use two or three class periods talking about types of chemical reactions used in the production of materials common to the students.

The students will find as much material as they can on the production of one of the materials discussed in class. This will require research in the school library.

The students will be provided with the addresses of industries producing the materials they choose.

The students will write letters requesting information on processes and chemical reactions used by the company. Letters should be approved by the teacher.

Each student will present the materials they acquired to the class.

Resources and Materials:

American Iron & Steel Institute,
Bedford Mills, NY 10507

American Society of Metals,
2238 Euclid Ave., Cleveland,
OH 44115

Atlas Chemical Ind., Wilmington,
DE 19899

Eastman Kodak Co., Rochester,
NY 14650

Freeport Sulfur Co., 161 E.
42nd St., New York, NY

Reynolds Metals Co., 6601 W.
Broad St., Richmond, VA 23218

U. S. Atomic Energy Commission,
P.O. Box 62, Oak Ridge, TN 37830

Water Conditioning Foundation,
1202 Waukegan Rd., Glenview,
IL 60025

Evaluation: Letter form used. Individual progress and report on reaction.

Comments on use: Students in physical science will be motivated by their interest in how various materials are made.

Objective(s): The student will be able to use resource material effectively to find information on careers in science related fields. The students will be able to list some of the science careers and select two or three that he is interested in.

Procedure:

Students will write a paragraph explaining their concept of a career.

Students will make a list of as many careers as they can think of that are related to science.

Students will choose three of the careers they listed and research each.

Students will use as many sources as they can.

Students will make a list of resources used in their inquiry.

Resources and Materials:

Occupations and Careers
McGraw-Hill Book Co.

Teaching Children about Technology
McKnight Publishing Co.

Introduction to Occupations

Careers: Exploration and Decision

Exploring Careers in Industry
McKnight

Evaluation: Individual projects along with resources used.

Comments on use: This activity is best suited for eighth and ninth grade. This age has probably not given any real consideration to choosing a career.

Subject Area(s) Science

Unit(s) Population, Researching a Scientific Problem

Objective(s): The student should: be able to distinguish between an open and a closed population; become familiar with the microscope as a tool for research; be able to make a graph indicating the growth and stability of a population; be able to interpret a graph indicating a change in a population and make certain generalizations about factors which cause the fluctuation on the graph; become familiar with the procedure used in investigating a scientific problem; be able to make a comparison between his research on a population and the process used by a research biologist.

Procedure:

Students should be divided into groups of 5 or 10, preferably 10. Using a grease pencil, number the ten test tubes for each team starting with 0 and ending with 9. These numbers will represent the number of days the population culture will be allowed to grow. The population studied will be a yeast culture. Yeasts are used for two reasons; first they reproduce rapidly providing a large number of individuals, second they are cheap and easy to care for and grow.

Ten milliliters of the sterile medium should be placed into each tube and the tube covered with foil. Each student should be assigned a test tube if 10 members, 2 tubes if 5 members. Students should put 10 drops of the yeast culture into their own test tubes and recover with foil as quickly as possible.

The person who is assigned tube 0 should then drop 20 ml of formalin into his tube thus preserving the yeast at 0 days. The remaining tubes should be incubated at 22°C in a dark place. On the next day, the student assigned tube 1 should add 20 drops of formalin to his tube. This should be repeated each day until all 10 tubes are fixed with the formalin. After the first 2 days, students should be responsible for adding the formalin without being told. This should not require more than 4 to 6 minutes at the beginning of class. It will be necessary to fix two tubes during a weekend. It is best if the students label their tubes and have the teacher fix the

Resources and Material:

Grease pencil, 10 test tubes, sterile medium, yeast culture, formalin, aluminum foil, microscope slides, cover slips, microscopes, 15 test tubes for dilution, graduated cylinder, 300 ml distilled water, bunsen burner

Preparation of sterile medium-- 1 cube beef bouillon, 20 grams sucrose, 25 ml of molasses, 500 ml of water--combine the above materials and heat almost to boiling. Filter the medium and place 10 ml in each test tube needed. Place the squares of aluminum foil over the test tubes and place in a beaker of boiling water for 15 minutes. Allow the tubes to cool before introducing the yeast culture.

Preparation of the yeast culture-- 2.3 grams dry yeast, 25 ml of distilled water--combine the yeast and the water. Stir until the yeast is well dissolved. Transfer 1 ml of this into 250 ml of distilled water. This will make a

Evaluation:

Comments on use:

Objective(s): The student should be able to predict population size at a future point by using rates of population determiners.

Procedure:

tubes during the weekend.

Students should be given another culture of the yeast so they can practice the process of dillution and counting. To make counts the students should work in pairs. This is to emphasize the importance of consistency in counts. Students should be told that a count of 75-125 is the best range of numbers to count. Each member of the team should make 4 counts by counting the number of yeasts visible in 4 different fields of the microscope. The second member should then make his counts using the same slide. After both have made their counts, each member should add his 4 counts together and divide by 4. If the average is farther apart than the chart indicates both members should make their counts over.

No. of Yeast per Average Count	Difference in the Two Averages
1 to 15	1
16 to 30	3
31 to 45	5
46 to 74	7
75 to 275	10

Resources and Materials:

0 day culture of about 15-20 yeast per count.

Ecology of Populations, Boughey, A.S., NY, Macmillan Co. 1968

Animal Populations, Browning, T.O., NY, Harper and Row Publishers, Inc., 1963

Biological Science, an Ecological Approach, BSCS, Rand McNally and Co., 1973

Ecology, Odum, E.P., NY, Holt Rinehart and Winston, Inc. 1963

Sourcebook for the Biological Sciences

Evaluation:

Comments on use: Yeast provide excellent characteristics for study. They are easy to see using a light microscope and reproduce rapidly. This activity will take about 15 days to complete, not counting the time for discussion on research careers. The amount of discussion will differ from one class to the next. Some of the problems that may arise are: Many students do not know what yeast look like. Students may not be able to use the microscope very good at first. Like any activity, there will be some students that will not read and follow the directions. Students may have problems under-

Objective(s):

Procedure:

Dilutions should be explained carefully to students. Dilutions are made by using 9 ml of water and 1 ml of the yeast culture. If the culture is still too populous then repeat the dilution. Each dilution is by a factor of 10. Original culture 1:1, 1st 1:10, 2nd 1:100, 3rd 1:1000. The students need one or two days for practice on counting and diluting their cultures.

The students should set up data tables so they can record each count, the average, and average multiplied by the dilution factor for each culture tube. Each pair of the team should supply the rest of the team with their data. Each student should plot their data on a graph with the average number of yeasts per field times the dilution factor on the vertical axis and the days incubated on the horizontal axis. The class should then prepare a class graph on a bulletin board. Each team should enter their data on the graph using a different color line for their team. This will make it easy for the class to compare data.

Discussion: It is important that you discuss factors which would cause fluctuation in the line of the graph. Some students will also have trouble understanding how to interpret the data. It is important that the activity and discussion on a career in biological research is started. It should be pointed out that this procedure is very similar to that used by a research biologist.

Evaluation: In using this activity, a teacher may at first become frustrated because there may be many small problems. Generally the activity gives students very good experience in researching a scientific problem, organizing data, using a microscope, working together as a group and interpreting data.

Resources and Materials:

Comments on use: standing how to count the yeast and make dilutions. The teacher should explain this two or three times. Students should be told how to set up their data using a chart so it will be easy to compare with other data. It is important that students are kept working or the activity will bog down and the students will become uninterested. Advise students to keep the cultures covered to avoid contamination.

Subject Area(s) Science

Unit(s) Career Education in Science

Objective(s): The students will have reasons for learning out of the text. Students will be familiar with processes used in scientific related careers.

Procedure:

As the teacher goes through various units in science, he should refer to industrial, conservation, or any other career related to the topic. This gives the student an idea of careers open in the field of science and at the same time the students will become familiar with scientific processes.

Teachers should encourage class discussion related to careers involved in science.

Resources and Materials:

Textbooks
Professional science books
Local industries, conservation agent, hospital, veterinarian, greenhouse

Evaluation: Student evaluation is by choosing of a career in science when they graduate from school.

Comments on use: Should be used for all ages.

Subject Area(s) Physical Science

Unit(s) Analysis of Air for Carbon Dioxide

Objective(s): The students will be able to perform the test for carbon dioxide. The students will become familiar with other practices for testing air and waters.

Procedure:

Set up a test tube in a clamp on a ring stand. Slant the tube at an angle of 20° from the table with the open end up. Place a one hole stopper in the tube. Place a glass tube bent in a 90° angle through the stopper about .25 inch. Place the other end of the glass tube in the bottom of another test tube filled with lime water. Place 3 grams of copper II carbonate in the first tube and restopper. Heat the copper (II) carbonate until a change in color occurs. Carbon dioxide will bubble through the lime water and form a white precipitate. The white precipitate indicates the presence of CO_2 .

Invite an inspector of sewage treatment into the class and have him discuss ways that water is tested for various elements and compounds.

Invite an inspector from an industry that supervises the amount of pollution emitted by the plant into the air. Discuss ways that the presence of certain pollutants are detected.

Resources and Materials:

Ring stand, two test tubes, test tube clamps, copper (II) carbonate, lime water

Local inspectors of sewage treatment and industrial air pollution

Evaluation: Evaluate using lab technique and write-up.

Comments on use: This activity is well adaptable for general science classes, biology classes and chemistry classes.

Subject Area(s), Physical Science

Unit(s) Temperature of a Bunsen Burner
or Melting Point of Aluminum

Objective(s): Students will be able to determine the amount of heat produced by a bunsen burner. Students will be able to list ways that the melting point of metal ores are involved in the high cost of metals.

Procedure:

With a pair of tongs, hold a piece of aluminum wire in a bunsen burner. Have the students look up the melting point of aluminum and make observations of the wire in contact with the flame. Using the information about the melting point of aluminum, have the students determine the minimum temperature of the hottest part of the flame.

Have the students write a steel refinery and inquire about temperatures required for the processes and the amount of fuel used to make a given amount of steel.

Have a class discussion about commercial production of iron, copper and aluminum along with other metals that students bring up in class.

Resources and Materials:

Aluminum wire, bunsen burner

Chemistry Handbook, New York,
Handbook of Chemistry and
Physics

Evaluation: Students should be evaluated using their observation and conclusion on the temperature of the burner flame.

Comments on use: This activity should be used with students at least in the ninth grade. Younger students may not understand the industrial production of metals.

Subject Area(s) General Science

Unit(s) Activity of Metals

Objective(s): Students will be able to list which of the metals, copper, iron or magnesium is most active to least active. Students will become familiar with processes used in industries which involve activity of metals.

Procedure:

Prepare a diluted solution of potassium chloride and divide the solution equally among three beakers. In one solution, place a sandeol nail. In the next solution, place a nail wrapped as tight as possible with a bare copper wire. In the last beaker, put a nail wrapped tightly with a piece of magnesium ribbon. Have the students observe these about three days. Most active metals will corrode first.

Plan a field trip to a local industry that uses metals in their production lines. Have the students make a list of chemical reactions that involve metals that are used in the industry.

Resources and Materials:

Potassium chloride, three beakers, three nails, copper wire, magnesium

Local manufacturer using metal reactions

Evaluation: Self-evaluation by interest levels of the individual.

Comments on use: This activity may be used effectively in a number of units in chemistry or physical science.

Subject Area(s) Science

Unit(s) Equipment

Objective(s): To help the students learn the names of laboratory equipment. The students will be able to use the equipment in the lab. The students will have seen how these instruments are used in professional jobs.

Procedure:

Show the students each instrument used in the lab and have them make a list of them and their uses.

Have the student use the equipment by making measurements and handling glassware with tongs and clamps.

Arrange a field trip to a local hospital and have the staff show the students how they use the same instruments in their work along with more advanced equipment.

When class returns to school, have them discuss the way some of the instruments in the hospital work and have them tell which they thought was the most interesting.

Resources and Materials:

Drying tube, tongs, erlenmeyer flask, funnel, iron ring, beakers, wide-mouth bottle, wing top, ring stand, buret clamp, bunsen burner, watch glass, forceps, test tube, florence flask, test tube clamp, test tube brush, graduated cylinder, glass plate, buret

Evaluation: Evaluate by written test over uses and names of instruments.

Comments on use: This activity is good for any science class that is involved in laboratory activities.

Subject Area(s) Biology

Unit(s) Cell Transport

Objective(s): The student will be able to describe the process of diffusion through a semi-permeable membrane. The students will be able to list diseases that are treated by medication that is transported throughout the body. The students will understand the idea of transport against a concentration gradient.

Procedure:

Set up a test tube on a stand using a clamp that will hold the tube firm enough to turn the tube upside down. Fill the tube with a solution that is just basic enough to turn phenolphthalein pink. Use a small square of paper and cover the tube. Hold your finger over the paper and turn the test tube upside down. The pressure in the tube will be equal to the pressure outside and the solution will stay in the tube with the paper over the mouth. Place an erlenmeyer flask of concentrated sulfuric acid under the test tube. Lower the test tube 1/8 inch from the flask. As the acid diffuses through the paper, the solution will change the pink solution to a colorless solution. The paper serves as a semi-permeable membrane. The water cannot penetrate the paper but the acid can diffuse from the flask through the paper into the solution. Students should discuss other types of transport such as active transport. Students should make a list of diseases and discuss the way transport in cells feeds, spreads or treats diseases. Invite a pathologist to visit the class and discuss diseases and cells.

Resources and Materials:

1 test tube, 1 stand, basic solution concentrated H_2SO_4 , paper, local pathologist

Evaluation: Evaluate by write-up of observations on demonstration of diffusion.

Comments on use: Most junior high and high school students will be fascinated by the changing of the color of the solution.

Objective(s): The student will be able to prepare chlorine and study its properties. Students will become familiar with the process that professional chemists use in industrial processes.

Procedure:

Set up a ring stand. Elevate an erlenmeyer flask with a two hole stopper. Place a funnel through one hole until the stem is just above the bottom of the flask. In the second hole, place a glass tube that extends 1 cm into the flask. Use glass tubing as much as possible and set up 5 collection bottles with two hole stoppers in series with the glass tubing from the flask going to the bottom of the first bottle. The second hole will have a glass tube 1 cm into the bottle and this tube will connect to the second bottle in the same way tubing went into the first bottle. Repeat this until all 5 bottles are set up in a series. Half fill the last bottle with a sodium thiosulfate solution. Add 15 g of powdered manganese dioxide to the flask and then pour 40 ml of concentrated hydrochloric acid through the funnel tube. Heat the flask very gently to avoid too rapid production of chlorine. One way to tell when the bottle contains Cl_2 gas is by placing a white paper behind the bottle. The color will indicate if the gas is present. When the bottles are full, remove the stopper and place a glass plate over the tops.

Add 20 ml of water to one bottle and quickly cover with glass. Shake hard and observe the color of the water. With another bottle test the effect of the gas on red and blue litmus paper. Test the effects of the gas on colored cotton cloth. With the 4th bottle, place some news print in the bottle and see if the gas will bleach the print.

Resources and Materials:

Materials--ring stand, glass tubing, erlenmeyer flask, bottles for collecting gas, manganese dioxide, concentrated hydrochloric acid, litmus paper, red and blue cotton material, news print

Evaluation: Evaluate on lab procedure and safety precautions used in the laboratory activity. Students should follow-up the activity with a discussion on ways that this process could be used in industries.

Comments on use: Caution should be used in this activity since chlorine gas has a dangerous properties. This restricts the activity use to advanced students.

Subject Area(s) Biological Science

Unit(s) Careers in Nursing

Objective(s): To become familiar with requirements of the nursing profession.
Students will be able to describe some of the disadvantages of the nursing profession.

Procedure:

Visit a local hospital and talk with nurses and nurses' aids. When students return to class, have a follow-up discussion by reviewing the information learned from the visit. If possible, have a professional nurse visit the class. Students will probably have more relevant questions at this time.

Resources and Materials:

Community hospital nurse

Nursing home

Evaluation: Have students evaluate self-interest in profession.

Comments on use: This activity is probably more suited to girls than most boys.

Subject Area(s) Biological Science

Unit(s) Conservation--Farm Management

Objective(s): To give students first-hand experience at conservation practices on farms. Students will be able to make suggestions on improving conservation practices and not hindering from production.

Procedure:

Discuss some ways farmers conserve soil and protect animals.

Visit a local farm and talk with the farmer about what conservation means to him.

Students should ask about ways the farmer prevents soil erosion.

When students return to class they should discuss ways to increase the number of wild animals and improve farm production.

Students should evaluate the conservation practices used on the farm as poor, fair or good.

Resources and Materials:

Local farmers, conservation agent, conservation commission

Evaluation: Evaluate class reports of students and individual work on class activity.

Comments on use: Well adaptable for most age groups.

Subject Area(s) Science

Unit(s) Careers in Dentistry

Objective(s): Students will become familiar with the dentistry profession and related occupations.

Procedure:

Visit a local dentist and have him tell the educational requirements, problems with the profession and advantages in the profession.

Discuss related occupations. Ask students to focus on the people involved in dental care--lab technicians, drug salesmen, equipment builders, false teeth makers.

Resources and Materials:

Local dentist

Evaluation:

Comments on use:

Objective(s): To become familiar with the production of iron and steel. Students will be able to describe the chemical processes involved in purification of iron and the production of steel. Students will know the job opportunities in the steel and iron production.

Procedure:

Students will discuss building materials made of steel and iron.

Students will discuss castings and expense of steel parts for machinery such as farm equipment.

The class instructor should lead a discussion on the chemical production and refining of steel and iron. Discussion should include types of furnaces used in smelting processes.

The teacher should point out that large amounts of energy is required in the refining process and this increases cost of production as prices of fuel increase.

Students should write letters of inquiry to steel and iron industries asking for information on jobs in the industry and processes used in the plant.

Resources and Materials:

Gardner-Denver Co., Quincy, IL

U. S. Steel

Modern Physical Science, Holt
Rinehart and Winston

Modern Chemistry, Holt, Rine-
hart and Winston

Evaluation: Individual evaluation by interest.

Comments on user: Addresses for many of the steel and iron industries may be obtained from Modern Physical Science and Modern Chemistry published by Holt, Rinehart and Winston.

Subject Area(s) Biological Science

Unit(s) Forestry

Objective(s): Students will be able to identify many of the local trees. Students will be familiar with practices used by the forestry service. Students will be able to list job openings in forestry.

Procedure:

Discuss classification of the trees in the area which is walking distance from school.

Class will take a field trip to observe local trees and learn the common names of many varieties. Students should make a list of the trees and record distinguishing characteristics of each tree type.

Invite a local forestry agent to visit the class to discuss ways that forest areas are managed.

Have the students make a list of jobs connected with the forestry service and post the list on the bulletin board.

Resources and Materials:

Local residence permission to show the class the trees in the area

Local forestry conservation agent

Research in school and local library

Missouri Conservation Commission,
Jefferson City, MO 65101

Evaluation: Evaluate on common names of trees and research on jobs in forestry.

Comments on use: Students in junior high will enjoy the opportunity to get out of the school and walk around the community looking at trees. Many students at this age have decided to be conservation agents and this provides good opportunities to get a closer look at the profession.

Subject Area(s) Chemistry

Unit(s) Zinc and Its Properties

Objective(s): To become familiar with methods of research. Students will be able to list properties of zinc and describe some chemical reactions involving zinc.

Procedure:

Place one or two chunks of mossy zinc in a test tube containing 10 ml of dilute hydrochloric acid. Have the students make observations on the reaction. Test the gas evolved for hydrogen by placing a flaming splint in the tube. If there is a pop, this indicates the presence of hydrogen. Repeat this procedure only use dilute sodium hydride in place of hydrochloric acid.

Sandpaper a piece of zinc and observe its physical properties. Bend the zinc to see how flexible it is. Using forceps, hold a small chunk of zinc in the outer edge of a burner and note the color change.

Discuss the industrial process of refining zinc and other chemical reactions using zinc in industries.

Resources and Materials:

Zinc, mossy
Dilute HCl
Dilute NaOH
Test tubes, sandpaper

Modern Chemistry, Metcalfe,
Williams, and Caetha, Holt,
Rinehart and Winston, Inc.

Evaluation: Students can write this activity up as a lab and evaluation may be made on observations and organization of data.

Comments on use:

Subject Area(s) Biological Science

Unit(s) Conservation

Objective(s): To become familiar with job opportunities in conservation that does not require a four-year college degree. To be able to list jobs in conservation requiring a four-year degree. The students will be able to list types of conservation and describe the biological functions involved in conservation.

Procedure:

In class discuss the process of ecological balance and the pyramid of consumer levels.

Find out local conservation practices and list these on a bulletin board.

Have the students list conservation types, such as soil conservation, fish conservation, and water conservation.

Have the area conservation education coordinator visit the class and discuss the opportunities open to non-college graduates. The coordinator should discuss job openings and requirements of conservation agents.

The activity should be completed with a field trip to a conservation management area.

Resources and Materials:

Missouri conservationist
Missouri Conservation Commission
Local conservation agent
Nearest conservation management area

Evaluation: Class self-evaluation and individual project.

Comments on use: Usually teachers will find that conservation agents will be pleased to have the opportunity to talk to students. Most junior high students interested in science would like this activity because they usually hope to be conservation agents in time.

Subject Area(s) Biological Science

Unit(s) Veterinarian

Objective(s): To learn about the profession of a veterinarian. Procedures and materials used by a veterinarian in animal care. The students will become familiar with the education requirements for the profession and learn the academic requirements.

Procedure:

Visit a local veterinarian and discuss the profession in terms of academic requirements and materials needed to set up a veterinarian office.

When students return to class discuss the problems that a veterinarian might have. Talk about animal treatment and the possibility of malpractice suits against veterinarians.

Have the students talk about experiences that they have had on farms with animals that veterinarians have worked with.

Resources and Materials:

Local veterinarian
Local farmers and students in class that live on farms and have seen veterinarians at work

Evaluation: Evaluation may be made by having the students write a paper on the problems of a veterinarian.

Comments on use: This is a good activity for any age. Students in grades six through ten would probably like it most.

Subject Area(s) Junior High Science

Unit(s) Physical Science

Objective(s): The student will learn that the ignition system of a car is rather complex and that a person could specialize in just repairing and adjusting these parts.

Procedure:

Set up an operating car ignition system.

Resources and Materials:

Old distributor, coil, battery, high voltage wire, and spark plugs

If you don't have these, some student will; and he or she can probably help set them up.

An auto repairman or shop teacher if you need any help.

Evaluation: The students should learn how an ignition system works and something about how to adjust it.

Comments on use: Any auto mechanic can help and a trip to a good garage would be time well spent. The machines used today to analyze and adjust ignition systems could be demonstrated.

Subject Area(s) Junior High Science

Unit(s) Aviation/Mechanical

Objective(s): The student will learn that civil light aircraft must be inspected every 100 hours if used for instruction and every 12 months in any case. The student will learn that most major repair or alteration or any inspection for either 100 hour or annual must be done by a certified airframe and powerplant mechanic generally with inspection authorization.

Procedure:

The federal regulations covering 100 hour and annual inspections could be discussed. Here is a service that must be done by trained, licensed people. A very good presentation could be made by any local airframe and powerplant mechanic. Any private pilot could explain the procedure for repairs, inspection, etc.

Resources and Materials:

APR Federal Aviation Regulations and Airman's Information Manual \$4.95, available from Sporty's Pilot Shop, Clermont County Airport, Batavia, OH 45103

Local private or commercial pilot (he will have the above or its equivalent)

Evaluation: This would probably be used with any material on engines or airplanes. Without authorized, licensed mechanics, the airplanes are grounded. The student should understand this.

Comments on use: A visit to any airport will get a person all the free information and help needed.

Subject Area(s) Junior High Science

Unit(s) Weather/Aviation Use

Objective(s): The student will know that (a) weather is tremendously important to all aviation activities, (b) there are specialized sources for receiving this information which could offer career opportunities.

Procedure:

Study weather information services provided by the "Flight Service Stations," "Weather Bureau Airport Stations," and "Flight Advisory Weather Service." This can best be done by having a local pilot come in and talk about how important weather information is and how he obtains this information. If possible, take a trip to a "Flight Service Center" near your location which offers weather information. Any pilot will tell you where these are located.

Resources and Materials:

Book, Aviation Weather for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402, \$4.

Local private or commercial pilot

Any flight service station.
Call any time for information at any major airport.

Evaluation: This would probably be used with a unit on weather. Questions could be included on the unit test asking why weather is so important and who supplies this information service.

Comments on use: Any pilot will be more than happy to help and names of people can be obtained by visiting any airport, especially one that offers flight instruction. Also, much free material (pamphlets, booklets, etc.) may be obtained for the asking.

Objective(s): To repair a small electrical appliance so that the student will get an idea that repairmen are needed.

Procedure:

Ask any class to bring you some small electrical appliance that is broken. An iron, toaster, coffee pot, heater, fan, etc. could be used. It really does not matter if you fix it or not, but you should be able to figure out what is wrong. No real skill or knowledge is needed here as the students will learn much just by trying to fix something. The teacher must know enough to not get hurt by the 120 volt line. He or she must use simple safety precautions.

Resources and Materials:

Simple volt, ohm, meter (VOM)
Hand tools such as screwdrivers, pliers, soldering gun, etc.
These could be borrowed from the shop.

Evaluation: The student should learn how much can be saved by simple repair jobs.

Comments on use: A science teacher should be able to do simple electrical repair jobs. If you get a job that is too difficult or complex, just say so and don't attempt it. Try and pick something you have a chance of fixing.

Subject Area(s) Junior High Science

Unit(s) Electricity/Electronics

Objective(s): To stimulate interest in amateur radio (ham radio, not citizen's band).

Procedure:

Amateur radio is one of the best ways any person can become exposed to almost all phases of the broadcast and electronics world. The procedure is simple; contact the nearest amateur radio club or just a single ham, and he, she, or they will probably do the rest. The local radio station, electronics store, or civil defense organization will be glad to refer you to local amateurs (hams). Just tell the hams what you have in mind, and they will come to you with information, pamphlets, etc. They will probably invite interested people to club meetings or invite you and small groups of people to view their equipment in the classroom. They are generally friendly and quite happy to help.

Resources and Materials:

One or more hams

Evaluation: In general this activity will be done with a unit on electricity or electronics. Evaluation is judged by interest shown; anyone who becomes a ham knows a tremendous amount of practical information about electronics.

Comments on use: This activity depends upon how well you and the local amateur radio organization can work together.

Subject Area(s) Yeast

Unit(s) _____

Objective(s):

The student will know that yeast is a microscopic, non-green plant used in bread and beer making. A discussion might follow about how many job opportunities are available in the baking and brewing industry.

Procedure:

Place some sugar or whatever into a jar (the amount is not critical--say about 1/4 cup). Add water to fill and some dry bakers yeast. Let it sit in a warm place for a few days. Some things you might want to do:

- a. Let the students smell the mixture right after adding the water and yeast and again at the end of the period. Could they smell the fermentation process at work?
- b. Watch for the tiny bubbles of CO₂ given off. Explain that this is what makes bread dough rise. Better yet, get some bread dough and let them figure out how it rises.
- c. Take a yeast count everyday with a small sample and a microscope.
- d. Try and figure out why yeast production stops after a few days--add some more sugar. The alcohol inhibits further growth, but see if the students can figure it out. You might add a little of the old mixture to a fresh one containing only water and sugar to see if the yeast start growing.
- e. See if the student can find out how the yeast are reproducing--this of course will take a microscope.
- f. Set out a mixture of sugar and water to see if there are "wild" yeast spores around to start fermentation without any help from the bakers yeast.
- g. After a few days, let the students taste the yeast, water, sugar mixture. There will be some alcohol there but not very much at all. Students will really want to taste this; emphasize that it's not beer or parent trouble may develop.
- h. Investigate the possibility of producing a food supply from yeast. How much yeast can you get from one culture, and how could the yeast be prepared or sold? Investigate food products containing yeast (if any) in your area.
- i. Investigate how yeast can break sugar down into CO₂ and alcohol. This could be used to lead into a discussion of enzymes and their use in producing beer, especially the production and use of malt.
- j. Let some sweet corn or other seeds (barley for malt) germinate and then taste them to see if any starch has been broken down into sugar. Caution--use only untreated seeds, as many seeds for planting have been poisoned with a fungicide or pesticide.

- k. Try to produce some maltose from corn starch using germinated barley seeds as malt.
- l. Be sure and try to let the students look at the yeast cells with a microscope.

Resources and Materials:

Bakers yeast, quart jars (or almost any clear container), water, some sugar, molasses, honey or almost any substance containing large amounts of sugar. If possible, a microscope with 200 to 400 power magnification.

Evaluation:

A teacher could do any part or all of these things. The student could then be tested for concept understanding. The main idea here is that yeast is a non-green plant and does need an external food supply for energy. Naturally other non-green fungi could be introduced at this time.

Comments on use:

Have fun; it's simple and easy to do.

Subject Area(s) Topographic Maps

Unit(s) _____

Objective(s):

The students will be able to use and interpret some of the information contained in a standard 1:24000, 7½ minute topographic map.

Procedure:

This lesson should be more in the way of a unit. A teacher could go about as far as he or she wanted to in this depending on class interest and the teacher's personal feelings about map reading.

The students should be given some background information as to who makes and uses topographic map booklets from the Geological Survey Dept. Then a few simple topo maps could be drawn upon a chalkboard and the students could try and figure out what kind of shape they were looking at. The teacher should explain what a contour is and how these lines can be used to present information about the topography of the land. The scale of the map should be considered and distances between various points on the map may be measured. It works much better if a topo map from your own area is used. Handouts with a simple topo map could then be used to demonstrate slope and profile making. The students could then be given a standard (scale) topo map of their own area, and they could use these maps to calculate various distances between two points, finding highest and lowest elevations, profile along a given line, slope of streams, finding cliffs and flat areas, best routes for future roads (powerlines, pipelines, etc.), best wildlife areas, and to simply become familiar with the land area of the map. The time spent here could vary tremendously; a teacher might spend a few days or several weeks investigating these maps. Many of the students will want to purchase a topo map of their particular area. The teacher might even want to use this as a money-making project. The maps cost 75c each and can easily be sold for \$1. Most students will want to visit a particular area on the map; a field trip or several field trips could be scheduled to visit particularly interesting topographic features. This lesson is very open ended; considerable math can be used in finding distance and slope, or a person could get involved in making topographic maps from raw elevation data, or producing a model from a topographic map. Almost any subject can be considered with a topo map in hand.

The teacher might also wish to get other scale maps, some showing water, mineral, timber or other resources. There are maps which will show almost anything a person wants. A teacher would spend months on this topic and continually introduce fresh, new material. A class might also wish to visit the place where modern topo maps are made and gain some understanding of the photographic, computer technology now in use.

Resources and Materials:

Topo maps--should have one each or one for every two students.

Map reading booklet and symbols, U. S. Geological Survey, Washington, DC 20242 or obtain from Geological Survey, Box 133, Rolla, MO 65401

Rulers for every student

Evaluation:

Give the students a topo map and ask that they do something with it. Let them measure distance, slope, and make a profile, find various topographic features and then draw conclusions about land use and possible means of minimizing ecological damage. The students should be able to use the maps as another tool.

Comments on use:

Seventh and eighth graders seem to like to play with maps, especially on a clean floor.

David Carson

Objective(s):

The student will be able to make a scientific estimate of a population in any given area.

Procedure:

The student will determine how many dandelions (clover plants, field sorrel, hawkweed, grass blades, crab grass, plants, daisies, etc.) are in his or her backyard. First, they have to determine how they are going to sample (probably lay out several areas, take an average for a particular area, and then find the total area and multiply) and then try and figure out how best to go about this in their backyard. The teacher might want to just ask this question and give no instructions whatever, letting the students try on their own and then seeing what happens. The next day a discussion could show up both good and bad points about their methods. The students would then try again and see if they have better, more valid results. This idea of sampling will not be new to seventh or eighth graders, but they will have trouble trying to go out and do it. They will also probably have problems with trying to find area and then extrapolating the data to cover larger areas. Also advantages and disadvantages should be discussed. Valid sampling is highly dependent upon use of error minimizing techniques.

Resources and Materials:

Meter stick (yard stick or tape measure)
Backyard or cleared grassy area
Some time after school

Evaluation:

Seventh and eighth graders have a good imagination, so for an evaluation say that they are a conservation employee and they have a limited budget to find the rabbit population of their county so that hunting seasons and bag limits can be set. Give them a time limit of plans needed to sample the population density of the rabbits. The students will probably want to think about it for a day or two and then write a paper during class on how they will gather this data. It should be fun. The teacher could set limits on money, equipment, manpower, and time limits if needed.

Comments on use:

The technique of sampling is used a tremendous amount; the students should have some idea as to how it works and its advantages and its disadvantages.

David Carson

Subject Area(s) Science

Unit(s) Insects

Objective(s): Preparation of a report on the number and type of insects that can be found at night.

Procedure:

A student may go out at night and look on the underside of leaves and flowers in his garden and on tree trunks to find insects. A light may also be set up at night and various flying insects will be attracted to it. Also the reaction of various insects to light should be noted. This procedure is for use in the early summer.

Discussion on nocturnal behavior of insects vs. human beings.

Resources and Materials:

Evaluation:

Comments on use:

David Carson

Subject Area(s) Junior High Science

Unit(s) Gelatin

Objective(s): To find out how Jello is made.

Procedure:

Write a letter to the Jello Company: General Foods Corporation, White Plains, NY 10625. Ask them how they make Jello, where the gelatin comes from and how it is prepared.

Resources and Materials:

Evaluation: Most of the students will be very interested and surprised at the results. Jello is a fine product; but at first glance, its preparation may seem a bit repugnant.

Comments on use:

Objective(s): To see what happens to potato starch grains when boiled.
To understand nutritional elements of food.

Procedure:

Cut a very thin slice of raw potato and look at the starch grains under a microscope. Note their size and appearance. Have a student boil a potato and let them determine when it is done. Examine the boiled starch grains under the microscope. Note the difference. A discussion might follow on why its easier to digest cooked potato starch than raw starch grains.

Class discussion on importance of good nutrition for physical well being. How well does your family adhere to meeting seven basic foods requirements.

Resources and Materials:

A container, water, and heat source suitable for boiling a potato

Home ec teacher

Discussion or materials on 7 basic foods

Evaluation:

The student should be able to see the differences between the starch grains and know why cooked potatoes are easier to digest.

Comments on use:

Bring salt and eat the cooked potato.

Subject Area(s) Junior High Science

Unit(s) Sugar

Objective(s): To change table sugar (sucrose) to caramel.

Procedure:

Gently heat a little sugar until it melts. Continuously stir and add more sugar until a liquid amber mass results. This is hard to do without burning it; go slow and if the liquid becomes very dark brown or black, start over. If you heat it too strongly, it will also catch on fire; you have been warned. When all the sugar has changed into a smooth amber liquid, pour it out onto the foil spread over a flat surface--its very hot so use a formica desk or lab top desk. Let it cool. Break it up into small pieces and let the students each eat a bit.

Resources and Materials:

1 cup of sugar, 250 ml. beaker, a sheet of heavy tinfoil or aluminum foil, ringstand, ring, wire gauze, bunsen burner, and a long stirring rod
You don't really need any of this; all you are going to do is gently heat a container of sugar.

Evaluation: A chemical change has taken place here and the sucrose has been converted by heat into semisweet caramel. The students should understand by direct participation that the caramel is no longer the same as the sucrose.

Comments on use:

Much enthusiasm will be created. Some will do this several times at home just to see if they can make caramel.

Subject Area(s) Junior High Science

Unit(s) Molds

Objective(s): To grow some bread mold from spores contained in the dust from the classroom.

Procedure:

Moisten two paper towels and place them in the bottom of the quart jar. Place some bread or rolls on top of the towels and then wipe a small moistened piece of the bread in the dust from a corner of the room, placing it in the jar also. Put a lid on the jar to prevent the bread from drying out. After some mold has formed, it can be examined under a microscope. I suppose its possible that there would be no mold spores in the dust, but this has never happened yet.

Resources and Materials:

One quart jar and lid, bread or rolls (preferably homemade) and some water

Evaluation: The student should be able to identify major parts of a mold (mycelium, spore cases, spores, and filaments). The student should understand the function of these parts.

Comments on use: Someone will want to know if the bread can still be eaten. It can, but it might make someone mildly sick. The teacher might suggest that some mold be grown on cheese and then tasted to see if the flavor has improved.

Subject Area(s) Junior High Science

Unit(s) Food Calories

Objective(s):

To show that food calories are a measure of heat (not temperature) produced when a food is burned.

Procedure:

Set the beaker of water on the stand, supported by the wire gauze on the ring over the small container of nuts. The nuts may rest on the metal base of the ring stand and the ring stand should be on an asbestos pad to prevent burning the desk. The nuts will have to be heated before they will burn by themselves, and this is best accomplished with a propane torch or bunsen burner. Try and take the temperature of the water just when the nuts start burning or take the temperature beforehand and then set the beaker on the ring stand just when the nuts start burning. The idea is to determine how many degrees temperature rise a known amount of nuts can raise a known amount of water (in this case 250 ml. of water). From this, the number of calories of heat the water absorbed can be calculated. Calories - (number of ml. of water) times (centigrade degree rise in temperature).

Resources and Materials:

A small metal pan full of assorted shelled nuts, 250 ml. beaker of water, thermometer, ring stand, ring, wire gauze, a heavy asbestos pad, and a burner or torch. You don't really need any of this. The idea is just to burn the nuts and heat the water with the fire. Anyway to do it is all right.

Evaluation:

The student should be able to tell how food value is calculated and what a calorie is.

Comments on use:

Due to the many errors the teacher cannot say that the burning of the nuts supplied a certain number of calories, but the teacher can say that so many calories of heat were absorbed by the water. If the food was dry, burned in pure oxygen, and no heat escaped anywhere else but into the water, then an exact determination of calories produced could be made. The objective is to show the student how heat can be measured and how food value is measured. A discussion of possible errors could be a subject in itself here. Some students will probably want to look up how a lab grade calorimeter is constructed. Also, the calorie used here (1 calorie is the amount of heat needed to raise the temperature of 1 gram (ml.) of water 1 centigrade degree) is not a food calorie. 1 food calorie is 1000 standard calories.

Subject Area(s) Science

Unit(s) _____

Objective(s): Proper utilization of the school nurse.

Procedure:

The school nurse should know a great deal more about the human body than you do and also about health and medical careers. The nurse might be invited to speak on various subjects, such as:

- a. Various types of eye tests for color blindness and visual acuity
- b. Detection of Glaucoma
- c. How various tests such as the TB tests are administered and read
- d. Proper methods of giving artificial respiration
- e. Any sort of health oriented or medical occupation

Resources and Materials

One school nurse

Evaluation:

Comments on use: Anyone who can help you in the classroom should be at least consulted. The school nurse is a very valuable person. The teacher should use the nurse as a resource person for many different classroom activities.

Objective(s): To obtain peanut oil from peanuts.
To explore various use of peanut oil.

Procedure:

Grind up the peanuts and put them in a small jar. Cover them with carbon tetrachloride and let the mixture stand for ten minutes. Pour off the liquid into a small dish and let the carbon tetrachloride evaporate. **Caution: carbon tetrachloride is a poison; do not allow the liquid to evaporate in the classroom. Take it outside. Avoid any exposure to carbon tetrachloride.

The oil that remains after evaporation is peanut oil. The peanut oil may be tested to see if it burns and also to get an idea as to how much heat it will produce. Some idea of food value may be obtained in this manner. Do not eat any of this oil as some carbon tetrachloride may remain in it.

Discuss various uses of peanut oil in home and industry. Have students research other areas for possible current uses.

Resources and Materials:

Peanuts, carbon tetrachloride, small dish and jar

Evaluation: The students should know what peanut oil is and how it may be obtained. This should give the students some insight as to why nuts have so many calories. The extraction of oil with a solvent is an important chemical process. How many other oils could be extracted in this way? How many people are engaged in, say, the production of corn oil?

Comments on use:

Objective(s): To show that most seeds store at least a part of their food as starch and that this starch is broken down to sugar when the seed germinates.

Procedure:

Place a few grains of corn or barley (other cereal grains will also work) on a section of paper towel and put it in a jar. Keep the towel moist until the seed germinates. Then chew up the seed to taste it. If there is a sweet taste, the starch has been broken down into sugar. Crush a seed that is not germinated and taste it to see if there is any difference.

Resources and Materials:

Corn or barley grain

**Caution--these seeds may be treated with a fungicide; check before using.

Paper towels

Evaluation: The student should be able to tell why starch is stored up in seeds rather than sugar and also why the starch is broken down (by enzymes) into sugar when the seed germinates. The student must understand that sugar is water soluble and starch is not; therefore, the starch is trapped within the cell, but the sugar can dissolve and move out.

Comments on use: Students think this is lots of fun (especially tasting the seeds). This could also lead to discussions in the growing of grains and how more food value might be obtained in our grain.

Objective(s): To measure your lung capacity.

Procedure:

Fill the can with water and invert it into a sink or try partially filled with water so that the water contained in the can does not run out. Place one end of the tubing in the open mouth of the can under the surface of the water and have a student empty his lungs of air into the can. As air is forced into the can, the water runs out. The average seventh grader can almost empty a gallon can. Some air will naturally remain in the lungs so this is not an accurate test.

Resources and Materials:

A one gallon "AB Dick" duplicator fluid can or a gallon can with a small opening, a large tray or sink that will hold several gallons of water, and about three feet of small, flexible rubber tubing.

Evaluation: The students will all try to empty the can--girls generally have less lung capacity. If a record is kept, this may show up in the classroom.

Comments on use: It's more fun to use a glass jar rather than a gallon can, but they must be handled much more carefully.

Subject Area(s) Science

Unit(s) _____

Objective(s): Determination of blood pressure and heart rate before and after exercise.

Procedure:

Ask the school nurse to come in and take the blood pressure and heart rate of, say, 4 or 5 students while at rest, and then let them exercise for a few minutes, taking the pulse and blood pressure again. Do this one student at a time.

Discuss need for physical check-ups to possible prevent health problems.

Resources and Materials:

One school nurse with a sphygmometer

Evaluation: Encourage the students to ask the nurse questions about what blood pressure is, what is excessive BP or pulse rate, why exercise helps a person and questions in general about the heart and circulatory system.

Comments on use: If the teacher does this right, the nurse will teach a far better lesson than you can.

Objective(s): To measure the size of something within the field of view of a microscope.

Procedure:

Place the ruler under the microscope on its lowest power so that the width of the field of view can be measured. Have the students try this with higher magnifications (they can probably do it at 100x, but not at 400x). Calculate how far it is across the field of view at 40x, 100x, and 400x.

Resources and Materials:

One microscope (40, 100, and 400 power, if possible) and a metric system ruler

Evaluation: Let the students look at various things under the microscope and estimate their length and width by comparing with a known field of view.

Comments on use: So many times a student will look at something under a microscope and then say, "How small is it?" This lesson will at least let the student estimate the size of what they see under a microscope. Many people are engaged in the optic industry; a discussion of how microscopes work might also be appropriate.

Subject Area(s) Life Science

Unit(s) Ecology

Objective(s): Students will learn about careers in the ecological field and about what private citizens can do to help make the jobs of these people easier.

Procedure:

Students will hear a talk from a local conservation agent concerning his job and problems associated with it.

Students will report to the class on pollution or other environmental problems which they have observed in their community.

Students will organize a clean-up project in their community and carry out the project in order to gain personal experience as to the magnitude of the pollution problem.

Students will develop and execute a plan for educating people or at least making the people of their community aware of the need for individuals to do their share to reduce the pollution problem.

Resources and Materials:
Missouri State Conservation
Department

Personal experience

Advertisements in local
paper, posters, surveys

Evaluation:

Comments on user:

Subject Area(s) Life Science

Unit(s) Ecology

Objective(s): Students will understand the concept of "natural balance," or how all living things in a community are interrelated. Students will be familiar with man's influence on nature. Students will learn about changes within a community.

Procedure:

Students will read about and discuss the various relationships which exist, beneficial and harmful, within a wildlife community.

Students will read about successions in fallow-fields, on bare rock, in ponds, and in forests and will visit some of these areas to observe succession in various stages.

Students will learn about the exchange of vital gases (O_2CO_2) between plants and animals through the use of an experiment involving snails and green plants to produce gases, then testing with bromothymol blue solution.

Students will read about man's influence on his environment and report or discuss findings.

Students will do an exercise on the importance of predator control (birth rate of meadow mice and resulting population explosion without predators or disease).

Resources and Materials:

Exploring Life Science,
Thurber and Kilburn, Allyn
and Bacon Publishers, pp. 17-29

Textbook - local wildlife
communities

Textbook - actual laboratory
experiences

Textbook - local news media-
observation

Teacher's hypothetical situation
on blackboard

Evaluation:

Comments on use:

Subject Area(s) Life Science

Unit(s) Careers in Life Science

Objective(s): Students will gain knowledge and understandings of careers related to life science; what careers are, in fact, related to life science and what these people do.

Procedure:

Students will read about the forestry-lumber industry and will view films concerning the wise use of forest resources and the people engaged in forestry.

Students will hear a talk by a local or nearby farm agent (MFA, Mo. Farmer's Coop, the University of Missouri Agriculture Department, etc.) concerning farming as a career and wise farming practices.

Resources and Materials:

Textbook, library resources, films from local libraries and Missouri Conservation Department
University of Missouri Extension Services, MFA, Missouri Farmers Coop, NPO

Evaluation:

Comments on use:

Subject Area(s) Health

Unit(s) Drug Education

Objective(s): Students will become familiar with the various dependency-type substances commonly abused, their effects upon the human body, and the various ways in which the substances are abused. Students should be able to make an intelligent decision concerning their own use of these substances. (To use or not to use)

Procedure:

Students will conduct an indepth study of the Surgeon General's reports concerning cigarette smoking.

Students will try to find out more about the relationship between cigarette smoking and accidents.

Students will conduct a debate as to the pros and cons of smoking from the teenager's viewpoint.

Students will research a particular type of drug dependency and report to the class as though they actually were the dependent person.

Students will hold a panel discussion on the magnitude of the drug problem in their own geographical area and what can be done to help.

Students will hear a talk by local police or State Patrolman concerning drug abuse in their community or area.

Resources and Materials:

Copy of the Surgeon General's Reports

The National Safety Council,
425 N. Michigan Ave., Chicago,
IL 60611; The American Insurance Institute, 85 John St.,
New York, NY 10038

with medical personnel, student
surveys
Local police, State Highway
Patrol

Evaluation:

Comments on use:

Subject Area(s) Health

Unit(s) Health Careers - Services

Objective(s): Students will gain an awareness of what people in the various health careers actually do and some of the requirements of the health occupations.

Procedure:

Students will each select a health-related occupation, research this occupation, and tell the class what is involved in being a physician, nurse, ophthalmologist, etc. as though they actually engage in this occupation. (Students may dress in the attire suitable to their particular occupation.)

Students will view films on health-related occupations.

Students will participate in panel discussions concerning the availability and cost of medical personnel and treatment in Benton County.

Students will tour the ambulance facility in their own vicinity, including a talk on the use of the various ambulance equipment and ambulance procedures by a qualified ambulance operator.

Students will try to find out some of the methods presently being used in modern heart surgery and try to find out some of the heart-surgery techniques which are still experimental.

Students will find out all they can about quackery in order to protect themselves and others from unsafe or useless "medical" practices.

Students will try to find out the specific educational qualifications necessary to become a psychiatrist and

Evaluation:

Comments on use:

Subject Area(s) Life Science

Unit(s) Heredity

Objective(s): To show how a geneticist can predict to a degree what an animal's traits might be.

Procedure:

Mark 2 squares of paper with the letter B for brown eyes and M for mother.

Mark 2 more squares with the letter b for blue eyes and F for father.

Place both M squares and both F squares together to represent the 2 genes for eye color in both the mother and the father.

Move one M square and the other F square down and place them side by side.

Ask livestock farmer to explain to the class breeding procedures in reference to breeding for desirable traits in reference to milk production, beef sales, etc.

Resources and Materials

Paper, scissors, pen or pencil,
doctor, nurse, geneticist
Livestock farmer
Biology text

Evaluation:

What is the gene combination of the fertilized egg cells? Are other combinations possible?

The gene for brown eyes (B) is stronger than the gene for blue eyes (b). What is the color of the eyes of a child with the two genes Bb?

Comments on use:

Subject Area(s) Life Science

Unit(s) Plants: Interdependence

Objective(s): To show how a conservation agent can help improve fishing in lakes and ponds.

Procedure:

Fill each of the 6 in. test tubes $3/4$ full of water.

Into test tubes #1 and #2 place one small snail and some algae.

Into #3 put only some algae.

In #4 put only one small snail.

Place a cork in each test tube.

Place test tubes #1, #3, and #4 where sunlight cannot reach it.

After 2 days, begin checking each test tube and record what is happening. Continue checking for 5 days.

Invite ecologist and/or conservation agent to explain other types of imbalance relationships that cause pollution.

Resources and Materials:

4 each 6 in. test tubes marked #1, #2, #3 and #4

6 corks

snails

algae

dark place

sunlight

ecologist

conservation agent

Evaluation: Describe and explain what happened in each of the test tubes. Why do both the snail and algae survive when together in a test tube exposed to the sun?

Comments on use:

Subject Area(s) Life Science

Unit(s) Plants

Objective(s): To see why farmers need to use fertilizers.

Procedure:

In a small pot plant a tomato seed in a known weight of soil.

Allow the plant to grow the tomatoes ripe and ready to eat.

Very carefully remove the plant from the soil. Retain as much soil as possible.

Very carefully weigh the soil.

Resources and Materials:

Seeds, pot, soil, water, scales

Evaluation:

Students should be able to explain the differences in weights of the soil.

Students should be able to predict what would happen if the same soil were used over and over without adding to it.

Comments on use:

Very careful measurement of weight is required.

Subject Area(s) Life Science

Unit(s) Plants

Objective(s): To show why some farmers need to irrigate their crops.

Procedure:

Half fill a 6 inch test tube with water.

Half fill a 500 ml beaker with water and add a few drops of red ink to the water.

Cover the test tube with sausage skin and secure it with a rubber band.

Turn the test tube upside down into the beaker of water and ink.

After 1 hour check the color of the water in the test tube.

Resources and Materials:

6 inch test tube

500 ml beaker

sausage skin

rubber band

red ink

eye dropper

Evaluation: The student should be able to explain how the ink got into the test tube. The student should be able to explain how nutrients get into plants.

Comments on use:

Subject Area(s) Life Sciences

Unit(s) Properties of water

Objective(s): To show the student how ice cream is made.
To show the student the relationship between ice and salt when it is used as coolant.

Procedure:

Select an ice cream recipe and follow its directions.

Place the container with the liquid ice cream inside into the ice cream freezer and start the motor or begin the cranking.

Fill 1/4 of the freezer around the container with crushed ice, add a very thin layer of salt. Alternate ice and salt until freezer is full.

Add ice and salt as needed until the motor stops or becomes too hard to crank.

Store or eat the ice cream.

Resources and Materials:

Ice cream recipe and ingredients
Freezer, salt, ice, power source

Evaluation: The student will be able to explain why the salt is added to the ice.

Comments on use:

Subject Area(s) Life Science

Unit(s) Microorganisms

Objective(s): To show one way that man can preserve food for future use.

Procedure:

Place a small piece of bread in each of 4 sterilized baby food jars.

Moisten each piece of bread and put the lids on tight.

Take jar #1 to the kitchen area, open it, walk around the kitchen and put the lid back on.

Take jar #2 to the locker room, open it, walk around the locker room, and put the lid back on.

Open jar #3 in the classroom, walk around and put the lid back on.

Do not open jar #4.

Place all four jars in a warm dark place. Check for mold in 2 days and then every day for 5 days.

Resources and Materials:

4 baby food jars with lids marked #1, #2, #3, and #4
Bread, water, eye dropper

Evaluation:

The student should be able to explain why mold grows on the bread in the jars.

The student should be able to explain why the amounts of and color of mold is not the same.

Comments on use:

Subject Area(s) Life Science

Unit(s) Properties of Water

Objective(s): To show how a water plant operator can test water.
To show students how water aids plant growth.

Procedure:

Fill one clean, dry pyrex beaker with tap water;
One with pond water; and one with rain water.

Boil the water in each beaker until all the
water is gone.

Observe the beakers after they cool.

Discuss what was left in the beakers and explain
why.

Discuss relationship of water chemical content
to plant growth.

Resources and Materials:

3 beakers, tap water, pond
water, rain water, heat source

Evaluation: Students should be able to explain why sediment was left in the beakers.
Students should be able to explain why this property of water can aid plant growth.

Comments on use:

Subject Area(s) Life Science

Unit(s) Microorganisms

Objective(s): To make the student aware that mold can be used to process food.

Procedure:

Use a standard bread recipe to make bread.

Observe what happens when the recipe says to
"cover the dough and let it rise."

Invite baker or home economy teacher to the class
to explain uses of yeast.

Resources and Materials:

Standard bread recipe and
ingredients

Oven

A baker or home economy teacher

Evaluation:

The student should be able to explain what is happening when the bread rises.

The student should be able to explain what the yeast (mold) does to the sugar.

Comments on use:

Subject Area(s) Life Science

Unit(s) Microorganisms

Objective(s): To show how a laboratory technician can collect and grow bacteria cultures for study.

Procedure:

Using the prepared agar plates, collect bacteria in #1 by removing the cover and rubbing your finger across the surface of the agar.

Collect bacteria in #2 by using a cotton swab to run on the inside of your mouth and then on the surface of the agar.

Collect bacteria in #3 by dipping a sterile wire loop in pond water and rubbing it across the surface of the agar.

Place the agar plates in a warm dark place for 24 hours.

Resources and Materials:

Textbook, lab technician,
3 prepared agar, plates marked
#1, #2, & #3
Wire loop, sterile cotton swabs

Evaluation:

The student should explain why the agar is needed to grow bacteria.

The student should be able to list at least 5 places to collect bacteria.

Comments on use:

Subject Area(s) Life Science

Unit(s) Microorganisms

Objective(s): To show how a laboratory assistant can prepare a nutrient for growing bacteria.

Procedure:

Mix together in a pan:

- 1 pint cold water
- 5 beef bouillon cubes
- 1/4 tsp. salt
- 1/4 tsp. soda
- 1/4 oz. gelatin

Boil gently until mixture is clear.

Sterilize 12 petri dishes by boiling.

Pour the hot nutrient into the petri dishes, cover immediately and allow to cool.

Resources and Materials:

- 12 petri dishes
- 5 bouillon cubes
- salt
- soda
- gelatin
- water
- heat source
- pan
- measuring spoons
- scales

Evaluation:

Students should be able to explain why the beef bouillon cubes and the gelatin are used.

Students should be able to tell why the petri dishes need to be sterilized.

Comments on use:

Subject Area(s) Life Science

Unit(s) Microorganisms

Objective(s):

To show students how microscopes are used to see very small things.

Procedure:

Mount a specimen on a slide.

Place the slide on the microscope stage.

Turn the mirror so that light passes through the specimen and into the lenses.

Look into the eye piece and turn the coarse adjustment until a fairly clear picture is seen.

Sharpen the picture with the fine adjustment.

Resources and Materials:

Microscope, light source,
slides, specimens

Evaluation:

Students should be able to demonstrate efficient operation of a microscope.

Students should be able to explain the importance of correctly using a microscope.

Comments on use:

Subject Area(s) Life Science

Unit(s) Cells

Objective(s): To show how a laboratory assistant prepares a slide for study.

Procedure:

Cut an onion into quarters. Separate several layers from one quarter of the onion. Select an inner layer and peel off a piece of the inner skin with a pair of tweezers. Place the small piece of skin on a clean slide. Place a drop of water on the onion skin on the slide. Add a drop of iodine to the skin and water. Place the slide on the microscope stage and observe the "skin."

Resources and Materials:

Onion, knife, slide, microscope, tweezers, water, iodine, eye dropper

Evaluation:

The student should be able to state why the iodine is added.

The student should be able to find the nucleus, cell wall, individual onion cells.

Comments on use:

Objective(s): To show how a nurse or laboratory technician can tell your blood type.

Procedure:

Draw two circles on a clean dry slide and label one circle Anti-A and the other Anti-B.

Place a drop of liquid from the bottle marked Anti-A in the Anti-A circle and do the same for the Anti-B circle.

Prick your finger with a lancet.

Use a toothpick to place a drop of blood into the Anti-A circle.

Use another toothpick to place a drop of blood in the Anti-B circle.

If your blood clumps in Anti-A, you have Type A.
If your blood clumps in Anti-B, you have Type B blood. If it clumps in both, you have Type AB and if it does not clump at all, you have Type O.

Resources and Materials:

Microscope slide
Anti-A serum, Anti-B serum,
toothpicks and lancets

Evaluation:

The student should be able to predict what would happen if Type A blood was mixed with Type AB blood.

Comments on use:

85

Parent permission should be obtained.

Objective(s):

To show one way a doctor can tell if you are in good physical shape.

Procedure:

While sitting, take your pulse in your wrist for one minute, wait one minute and take it again; do this one more time and make an average.

Hop on one foot fifty times and take your pulse immediately for one minute. Rest one minute and take your pulse again. Do this until the pulse rate is fairly constant.

Resources and Materials:

Watch with a second hand

Evaluation:

Students should be able to explain why the pulse rate is high after exercise. Students should be able to explain why the pulse rate begins to slow or become lower after exercise.

Comments on use:

Subject Area(s) Life Science

Unit(s) Respiration

Objective(s):

To show how a coach can tell if his athletes are getting in shape.

Procedure:

Count how many times you exhale in one minute in a resting position. Do this three times and make an average.

Run the length of a football field and count the number of times you exhale in one minute immediately afterward. Do this three times and wait one minute before each count. Find the average.

Find out how long it takes to get back to your resting breathing rate.

Resources and Material:

Watch with a second hand.

Evaluation:

Students will be able to tell why the breathing rate was fast after exercise. Student should be able to tell why more oxygen is needed for exercise than for resting.

Comments on use:

Objective(s):

To show how a boxer can defend himself against being hit every time.

Procedure:

Have your partner sit on a table or chair high enough that his feet do not touch the floor.

Place a blindfold over his eyes.

Tap your partner gently just below the kneecap with a rubber mallet.

Have your partner clap his hands as you strike his knee with the mallet.

Observe the reaction.

Resources and Materials:

Table or chair, rubber mallet, blindfold

Evaluation:

Students should be able to explain why the clasp occurred after the knee jerked.
Students should be able to show how reflexes help animals to survive.

Comments on use:

Subject Area(s) Life Science

Unit(s) Nutrition

Objective(s):

To show one way man can preserve food for future use.

Procedure:

Weigh the grapes; wash them in water and blot dry.

Remove the grapes from the stems and spread evenly on a tray.

Place a screen or cloth over the grapes.

Place the tray in direct sunlight to dry.

Check for dryness after four days. If not dry, wait one more day.

When dry, weigh the grapes and place in a glass container for storage.

Discuss the need for preserving food stuff for all members of the ecologic system. Examples: squirrels, human beings, rats, etc.

Resources and Materials:

Grapes, water, tray, screen or cloth, scales and sunlight

Evaluation:

The students should be able to explain what happened to the grapes and why raisins weigh less than grapes.

The students should be able to suggest methods of preserving other foods.

Comments on use:

Objective(s):

The student will be able to explain why fishermen fish at a certain depth.

Procedure:

Fill one quart jar with cold water and the other with hot water. Place a few drops of food color in each of the small bottles. In one, place hot water; in the other, place cold water; and put the caps on. Explain what happens when the bottle of cold water is placed in the jar of hot water and the cap is carefully removed. Explain what happens when the bottle of hot water is placed in the jar of cold water and the cap carefully removed.

Have students draw a diagram of a shallow lake that has a cold system flowing into it.

Discuss implications of fresh water ecology and fresh water foods.

Resources and Materials:

Two wide mouth quart jars, two small bottles with caps, food color, eye dropper and heat source

Evaluation:

The students should be able to conclude that the plants and animals differ at different depths in lakes and ponds.

The students should be able to diagram what happens when a cold system flows into a shallow lake.

Comments on use:

Objective(s):

To show how ecologists study the effects of temperature change on living things.

Procedure:

Draw a circle on the floor and place a frog in the circle. Gently touch the frog with the sponge to make it move. After ten seconds, measure in cm the distance the frog moved. Do this two more times and make an average. Fill the bowl with water and ice. Place the frog in it for five seconds. Immediately place the frog in the circle and cause it to move. Measure in cm the distance the frog moved after ten seconds. Do this two more times and make the average.

Discuss life cycles in all animals.

Compare the cycle relationship to human activities and lifestyles.

Resources and Materials:

Frog, water, ice, chalk, sponge, meter stick, bowl and watch with a second hand

Evaluation:

The student should be able to explain what happens to frogs in winter.

The student should be able to tell how this might help explain the disappearance of many species of reptiles and amphibians.

Comments on use:

Objective(s):

To show how farmers can control erosion in their fields. To show students the need for societal agriculture needs.

Procedure:

Place sand on a long board or in a long box lined with plastic. Tilt the board or box so that water may flow easily into a drain or large container. Spread the sand evenly and slowly pour water on the sand. Explain what happens. Mark circular grooves in the sand and slowly pour the water on the sand. Explain what happens.

Discuss the implications of poor soil conservation on food supplies of the nation.

Resources and Materials:

Sand, board or box, water, a drain or large container, soil conservation agent

Evaluation:

The student will explain how contour farming can benefit the farmer.

The student will draw conclusions on the food production and supply on farms where erosion is not controlled.

Comments on use:

Subject Area(s) Social Studies

Unit(s) History - U. S. Constitution

Objective(s): The student should understand the issues and feelings evident in the Constitutional Convention. The student will participate in the lawmaking process as in Article I.

Procedure:

A mock Constitutional Convention--Assign each student to research one person present at the Convention.

During the mock convention, the student will represent that person, his state's views, etc. when discussing the basic issues.

A mock Congress--Divide the class into 4 (2 House and 2 Senate) Congressional Committees. Each committee reviews a bill then submits it to the House (or Senate) floor. The process continues through the President and the possibility of an overridden veto.

Each student will compose a notebook of newspaper clippings illustrating different parts, qualifications, and procedures found in the Constitution. Each clipping should have that section underlined with an explanation of how that illustrates a Constitution principle. The Article in which that principle or fact is found should also be indicated. If possible, have a newspaperman as a guest speaker to discuss how his knowledge of history is important in contemporary newspaper writing.

Discuss any current bills under consideration in Congress that students might be interested in.

Resources and Materials:

Foundations of Freedom, pp. 194-204

Article I of the U. S. Constitution

Newspaper, paper, glue

Evaluation:

Critique notebook.

Comments on use:

Subject Area(s) Social Studies

Unit(s) Geography - European

Objective(s): The student can examine the European influences in America and individuals' lives.

Procedure:

Examine a U. S. map. Note all the Spanish and French names found for rivers, cities, etc.

Using foreign language records, illustrate the differences in languages and forms of communication in other countries.

Discuss the opportunities as a translator or interpreter for a person who is bi- or multi-lingual.

Resources and Materials:

Foreign language records

Evaluation:

Comments on use:

Subject Area(s) Social Studies

Unit(s) History - American Revolution

Objective(s): The students should discover the influences on the Americans during the revolution and how they can still see these influences today with different subject matter.

Procedure:

Examine some of the Revolutionary slogans and sayings. Draw a contemporary slogan or saying.

Examine the use of propaganda in the Revolutionary War. List the contemporary examples of propaganda in commercials, advertisements, political literature, etc.

Sketch an example of propaganda trying to influence someone to buy a product, vote for a candidate, etc.

Illustrate that every situation can be understood in different perspectives.

Write two newspaper articles. One found in an American newspaper describing the Boston Massacre; the other for a British newspaper describing the Boston Riot.

Resources and Materials:

Foundations of Freedom, pp. 124-125

Foundations of Freedom, pp. 132-136

Mania America, pp. 72-75
Foundations of Freedom, pp. 135-136

Evaluation:

Comments on use:

Subject Area(s) Social Studies

Unit(s) Geography - European

Objective(s): The student recognizes the similarities and differences between European and American cultures, resources and environments.

Procedure:

The student will write a letter to a friend in the U. S. as if he were one of the Norwegians described in the text. The letter should include description of his occupation, family, lifestyle, etc.

Provide examples of the different types of currency found in Europe. Have the students complete exercises on how to exchange money from one country's currency to another.

Discuss the procedures and problems of international banking.

If possible, have a banker knowledgeable on the the subject of international banking visit the class.

Resources and Materials:
Living as World Neighbors,
pp. 130-135

Local banker

Evaluation:

Comments on use:

Subject Area(s) Social Studies

Unit(s) Geography - United States

Objective(s): The student will have a general idea how environment affects lifestyles. The student will be able to identify the locations and reasons for various resources, industrial and farm centers in the U. S.

Procedure:

As an eskimo, how many different uses can you list for all parts of the seal.

Have the students indicate the major rivers and cities on a U. S. map. Then have them glue on representations in the proper places for the various resources, productions, crops, etc.

The students should write a short composition on where they would choose to live considering their occupations, the lifestyles, the climate, the environment, recreation possibilities, etc.

Resources and Materials:

Living as World Neighbors,
pp. 14-17

Maps, glue, popcorn, cotton,
small steel nails, small
plant charcoal pieces, tooth-
picks (lumber), rice, sugar
cubes, rubber bands, play
coins (U. S. coins), etc.

Comments on user:

Subject Area(s) Social Studies

Unit(s) History - American Indian

Objective(s): The student will recognize the various social systems of American Indians.

Procedure:

Sketch a family totem pole.

Compare this social system to others of interest.
Examples: American, British, some African tribes,
China, etc.

Discuss how social systems influence lifestyles.

Have students describe the social system of
their town.

Resources and Materials:

Foundations of Freedom, pp.
33-39

Evaluation:

Comments on use:

Subject Area(s) Social Studies

Unit(s) Geography

Objective(s): The student will discover lifestyles in the United States different from their own.

Procedure:

After reading the selections on migrant workers and the Vietnamese teens, the student will write a letter to an imaginary friend as if he were one of these people. The subject of the letter should reveal feelings about this type of lifestyle.

Resources and Materials:

"Migrants No More," Reader's Digest, pp. 98-100, July 1975

"World Cultures: Vietnamese Teens Tell Their Stories," Search Magazine, pp. 14-16, September 9, 1975

Evaluation:

Comments on user:

Subject Area(s) Social Studies

Unit(s) History - America

Objective(s): The student will discover the components that influence the size, crops, etc. of farms.

Procedure:

Sketch plans of the three different farm systems found along the Atlantic Coast - New England subsistence farming, Middle Atlantic - commercial farming, and the Southern plantation system.

Discuss how this type of farming influenced working habits, social class, and individual aspirations.

Resources and Materials:

The Foundations of Freedom,
pp. 87-88

Subject Area(s) Social Studies

Unit(s) Geography

Objective(s): The student will have an opportunity to plan a trip to some location in the United States at least 400 miles from his home.

Procedure:

The student will choose a location to visit at least 400 miles from home. The student will map out an automobile route to that city. If possible, the Chamber of Commerce of that location should be contacted. The student should present the places to visit enroute and at the destination. A possible budget for the trip will also be figured plus a list of clothing and recreational equipment appropriate for the area will be compiled.

Resources and Materials:

Road maps, addresses of Chambers of Commerce

Evaluation:

Comments on use:

Subject Area(s) Social Studies

Unit(s) Geography

Objective(s): The students will compare the philosophies and lifestyles of various world religions.

Procedure:

Several students will do further research on world religions. These students will compromise a panel discussing the characteristics of each religion. Example of participants could be a Hindu of the Brahman caste, a Hindu of the Untouchable caste, a Hebrew from Israel, a Moslem from Egypt, a Christian from Beirut, Lebanon, a Christian and a Jew from the U. S., a Catholic and Protestant from Ireland.

Discuss implications of religious beliefs on lifestyles, value systems, etc.

Resources and Materials:

Current reference materials

Evaluation:

Comments on use:

Subject Area(s) Social Studies

Unit(s) History

Objective(s): The student will study the effect that the stock market has on individuals and the nation.

Procedure:

Discuss the causes and results of the stock market crash of 1929. Provide a simulated stock market game. Let each student "buy" \$5,000 worth of stocks. Every other day, let the students read the stock reports in the newspaper to record the progress of their stocks.

Invite a stock broker to class to discuss stocks and the feasibility of another crash.

Resources and Materials:

Newspapers with the stock exchange

Evaluation:

Comments on user:

Objective(s): To give the student further study of China using sources besides the text. To give students an opportunity to formulate and organize a group activity. The student will recognize the component parts of a newspaper and television newsbroadcast.

Procedures:

The students divide themselves into groups of three to five. They are responsible for presenting various aspects of China in either a newspaper or newsbroadcast manner. The presentations should include current and historical news, weather reports, commercials, etc.

After the presentations, feast on and enjoy some Chinese fortune cookies.

Resources and Materials:

Maps, current magazines

Fortune cookies

Evaluation:

Comments on user:

Subject Area(s) Social Studies

Unit(s) History

Objective(s): The students will analyze the affect that the wildcat banks of the 1830's had in causing the Panic of 1837. The students will discover components of the present bank system.

Procedures:

Discuss land speculation, worthless money, wildcat banks, the Panic of 1837, and depression.

Analyze what to look for in opening a savings or checking account today. Discuss the difference between borrowing money for land speculation in 1830 and taking out a loan today.

Resources and Materials:

Foundations of Freedom
United States History to 1877
pages 301-302

Evaluation:

Comments on user:

Objective(s): The student will discover different inventions, their effect on America, and the patent procedure.

Procedures:

Discuss the effects the Industrial Revolution inventions had on the United States. Ask the students what they think has been the most important invention yet? What would they invent if they could? Analyze the patent procedure and the reasons for it.

Have students invent a product on paper and apply for a patent.

FOREWORD

Career education at the secondary level strives to develop the relationship between academic studies and life outside of school, to help each student to personally identify a desired life role, and to make possible the preparation necessary for fulfilling that life role.

There is no set "career education program" to be adopted by all school systems. Rather career education is a concept to be adapted to the needs of each community, each school system.

Nowhere in this guide is there a definition of career education. So many definitions have been developed that any individual can search for—and find—the one that suits his/her purposes. The activities, ideas, and suggestions herein do reflect the concept as it has been understood and implemented by the contributors.

Our goal in preparing and compiling these materials is to provide an idea bank. You as an educator can select those suggestions that could be easily integrated into your curriculum and enhance its value for your students.

Different contributors have approached this goal with various methods. Briefly stated activity suggestions comprise the bulk of the material. Please browse through the materials to find ideas that might be integrated with your on-going curriculum. Don't limit yourself to only one subject area—you may find an idea from another discipline that you can use with only slight adjustments.

We hope you enjoy the guide and would be happy to hear any comments you have on it.

Phyllis B. Stuerke
Secondary Specialist
Career Education Project
State Fair Community College
Sedalia, MO 65301

Objective(s):

The student will recognize herself/himself in terms of her/his feelings—both negative and positive—and her/his ambitions without clouding the picture with society's terms.

Procedure:

A paper is assigned of one to two pages in length. In this paper, the student is to describe herself/himself in terms of her/his feelings and ambitions. She/he is not to use terms as female, black, old, intelligent, single. These are words that society assigns. The assignment is to dig deep and look at what's inside.

Resources and Materials:

Evaluation:

By removing society's terms, the student can evaluate his feelings and ambitions. From this evaluation, he can better see what career he wishes to pursue.

Comments on user:

Besides helping the student, the teacher becomes enlightened as to some secret feelings. This always aids when helping students with their problems.

Subject Area(s) General Business

Topic(s) Careers

Objective(s): The student will answer some questions about his life and his career.

Procedure:

This booklet offered by the Institute of Life Insurance, takes a walk through the student's future including career, marriage, children, education, shopping skills, and insurance. The students are asked questions such as "What do you think is the ideal family size?" and "Why do you think a man usually earns more than a woman?" You may follow the sequence of subjects suggested in the book, plus adding your own personal experiences.

Resources and Materials:

A Date With Your Future, Education Services, Institute of Life Insurance

Evaluation: There is a checklist in the back of the book for them to fill out to check for understanding.

Comments on use: I thought this booklet was very good. Many of the questions asked in the booklet led to interesting discussion, and the students seemed to do some real thinking about their "future."

Subject Area(s) General Business

Unit(s) Business Communication

Objective(s) The students will write an effective letter of application.

Procedure:

Discuss items needed in a letter of application—chapter 34, textbook.

Prepare transparencies of various letters of application. Show these in class and point out why one is more effective than another—good points and bad points.

Discuss what statements might "turn a prospective employer off."

Have students make a rough draft of a letter for themselves. Proofread these with them and give suggestions.

Prepare final copy of letter—preferably typewritten with no errors.

Take the final copies to the school superintendent and have him make criticisms of them.

Resources and Materials:

General Business for Economic Understanding, Southwestern

Typing paper

Transparencies

Superintendent or local businessman to read the letters and make criticisms

Evaluation: Evaluate the students upon the letter—how neat, complete, concise, and courteous.

Comments on user:

Subject Area(s) Business Law

Unit(s) Contracts

Objective(s): Students will make rulings on cases presented to him using laws studied in contract unit.

Procedure:

Appoint a prosecuting attorney, defense attorney, and judge.

Give a copy of a case to each person and give them time to research it.

Begin the court session with the prosecution presenting its case first, then, the defense.

Have the judge rule upon the case.

Let each student have an opportunity to be either an attorney or judge with different cases.

Resources and Materials:

Applied Business Law

Cases concerning contracts

Evaluation: Evaluate the students upon their presentation of the cases or ruling.

Comments on use:

111

Subject Area(s) Business Law

Unit(s) Insurance

Objective(s): To expose the class more effectively to insurance and how it works by having an insurance agent speak to the class on the different types of insurance.

Procedure:

The students will read and study chapter 34 on "Nature of Insurance." This chapter will be discussed before the agent comes to speak to the class.

An insurance agent will come to speak to the class on the different types of insurance.

After the agent finishes his discussion, there will be time for a question/answer session for the class.

Resources and Materials:

Applied Business Law

MFA Insurance Agent

Evaluation:

The guest speaker allowed the students to get an outside and updated view on the types of different insurance policies. The class will be able to use the information that was received to better understand the following insurance material.

Comments on user:

Worked quite well. The class got some updated information that they wouldn't have received from their text.

Subject Area(s) Business Law

Unit(s) Court System

Objective(s):

The students will be able to actually see a court in session and how the jury is picked, the lawyers defend their clients and the duties of the judge.

Procedure:

Have students read and study chapter 6 on "The Court System." Discuss this chapter before the field trip to the court house.

When the students arrive at the court house, Judge Barker briefs the students on the case they will be seeing and how the court system works.

The students will actually sit in on the court case and hear the pleadings of the case and the verdict.

The students will prepare a review of the case they saw in court.

Resources and Material:

Applied Business Law

Judge Charles Barker

Evaluation:

Each review will be evaluated by the instructor by using a checklist.

Comments on use:

Worked quite well for me. The students enjoyed seeing what we had talked about in action. Seemed to be an excellent learning experience.

Subject Area(s) Business Law

Unit(s) Court System

Objective(s):

The students will be exposed to how the court house and its offices are set up and what offices are in the court system on the county level.

Procedure:

The students will read and study chapter 6 on "The Court System." This chapter will be discussed before the field trip to the court house.

The class will visit each office in the court house.

Each court office has a person who explains the duties and functions of each court office.

Resources and Materials:

Applied Business Law

Visit such offices as county clerk, county recorder, assessor, circuit court

Evaluation:

The students have to identify each court office and the person who holds the office. The duties and functions of each should also be known. Can also ask questions such as "What office should you go to for . . . (hunting and fishing permits, filing deeds, etc.)?" This is shown on a quiz given to the students.

Comments on use:

This plan worked very well in my class. The students enjoyed visiting each office and learning their functions first-hand.

Subject Area(s) Business Math

Unit(s) All Units

Objective(s):

Each student will be able to work problems at a quicker rate with greater accuracy.

Procedure:

The students are given problems (one at a time) on the board or orally by the teacher. Each student is to work the problem as quickly as possible obtaining a correct answer. When a student finishes the problem, he raises his hand and tells the answer. If correct he doesn't have to do any more speed drills that day. Only three guesses are accepted. The last one to finish the drill has extra problems due for the next day.

Resources and Materials:

Evaluation:

Comments on user:

Have used this in my math class. Seems to work good in developing speed in working problems.

Subject Area(s) Shorthand

Unit(s) Careers in the Office

Objective(s): The students will take dictation (office style) from local businessmen, with different types of interruptions.

Procedure:

Set up little "offices" in the room with boss's desk, boss's chair and secretary's chair. Place toy telephones on boss's desk.

Have boss (local businessman) paired off with shorthand students. The boss will dictate a letter to shorthand student as he would in a real office situation.

Have the boss dictate several letters. There will be various interruptions as the phone rings, someone at the door, etc.

Students will transcribe letters.

Discuss how to handle various interruptions.

Resources and Materials:

Guest dictators
Shorthand pads and ink pens
Toy phones

Evaluation: Evaluate the project by class participation in the discussion of how to handle various interruptions.

Comments on use:

Subject Area(s) Shorthand

Unit(s) Careers in the Office

Objective(s): The students will see a secretary doing her routine work in the office.

Procedure:

Begin by considering what would be routine jobs that a secretary must do daily. Are these important; if so, why?

Show the film "The Working World of a Secretary," which describes the basic office practices and procedures such as memos, mail and the telephone.

Arrange for the students to go in pairs to spend a morning (9-12 a.m.) with local secretaries. Have them keep a diary of all work done.

Return to class with diaries. Discuss these.

Consider the questions: "Is this a career for me?" "Do I want to do this type of work?"

Resources and Materials:

Film: "The Working World of a Secretary" by Eye Gate

Evaluation: Evaluate the class by their participation in the discussion.

Comments on use:

Objective(s): Students will determine what skills are needed to be a legal secretary and what training can lead to these skills.

Procedures:

Spend at least one morning with a local legal secretary. Have the students keep a diary of what is done in the office.

As a guest speaker, have a local lawyer speak to the students on what he expects of his secretary. Have a question and answer session.

As a guest speaker, have a representative of a college with a developed business program present to the students what classes are required to be a legal secretary. Have a question and answer session.

Resources and Materials:

A local legal secretary for the students to observe in her work.

A local lawyer to speak to the students.

A college representative to present programs offered to become a legal secretary.

Evaluation: Quiz the students upon the skills needed to be a legal secretary.

Comments on user:

Subject Area(s) Typing

Unit(s) Business Letters

Objective(s): The student should be able to compose and type correctly a business letter.

Procedure:

Discuss in class the various parts that can be used in a business letter. Students should be able to identify these different parts and their proper placement.

Student should type at least two business letters that vary in form and content. These should be handed in to the instructor.

Resources not material

Sample letter will be provided by the teacher to show proper form and content

Use:

Attention line

Subject line

Reference line

Blind carbon copy

Hand printed letterhead

Evaluation: Instructor will evaluate each letter and record the best grade for each student.

Comments on user: This has not be used yet in my class.

Objective(s): To make students aware of the misuse of grammar in written and spoken language, thus, becoming aware of their own efforts in correct speaking and writing.

Procedure:

Grammar Notebook

Students are to keep a daily journal of mistakes they see and hear in everyday language.

1. The exact quote
2. The quote corrected
3. If possible, the situation and who said it (the quote)
4. This is sometimes more beneficial if students listen and read for specific mistakes (ex. verb-subject agreement, dangling modifiers, sentence fragments, etc.).

Resources and Materials

Evaluation: The journal should continue from one to two weeks. Graded on number of entries, neatness, accuracy of corrections.

Comments on user:

Objective(s): To learn parts of speech and/or parts of a sentence.

Procedure:

Baseball Grammar

Divide class into two teams.

Each team selects a pitcher and coach.

The pitcher asks a question to each batter.

Batter has 15 seconds to answer question.

- a. If batter does not answer, he has struck out.
- b. If batter answers wrong:
 1. The batter is out.
 2. If a runner is on base, he may attempt to answer the question.
 - a. If the runner on answers correctly, he and all runners advance one base (as in a sacrifice fly).
 - b. If he answers wrong, he is considered thrown out trying to advance on a fly ball.
- c. If batter answers correctly:
 1. All runners advance one base.
 2. After reaching first base, runner has option of answering an additional question.
 - a. If he correctly answers additional question, he advances another base (as in a double).
 - b. If he is wrong, runners remain, the batter is thrown out trying to reach second.
- d. Before each pitch, the lead runner on base may attempt a steal by telling the pitcher he wants to answer instead of the batter.

Resources and Materials:

Plain English Workbook

Evaluation:

Comments on use:

Objective(s):

Procedure:

1. If he answers wrong, he is out.
 2. If he answers correctly, he advances one base.
- e. Teacher acts as umpire and time keeper.
- f. Hits, runs, stolen bases may be counted as extra credit.

Resources and Materials:

Evaluation: This worked very well in reviewing for a test.

Comments on use: It is best to simulate many of the rules of baseball for the sake of excitement. However, if the game becomes too complicated, the students become too "bogged" down in rules instead of reviewing.

Subject Area(s) English

Unit(s) Language Study

Objective(s): To learn the use and definition of "reports," "inference," and "judgment."

Procedure:

Students divide into groups of 4 to 7 members.

They select a product which they will sell in competition with another company.

Name products and company (ex. Chevrolet, Impala).

Create packaging, a slogan, magazine ads, and a 1 minute TV commercial (videotape if possible).

A board of investors will view a presentation of each group's ad campaign and will invest accordingly.

The company that sells its product to the investors may be awarded actual credit or extra credit.

Discuss techniques employed by each group.

Resources and Materials:

Dynamics of Language, first chapter

Evaluation:

Comments on user: Investors may be persons (teachers) from outside the class to insure objectivity. Evaluation sheets are filled out by the investors citing strengths and weaknesses of each group's presentation.

Subject Area(s) English

Unit(s) Language Study

Objective(s): To learn how the connotations, sounds, and implications of words influence mood in descriptive writing.

Procedure:

Students form a circle (15-25 is best).

Each is instructed to title a piece of paper with some scene they wish to describe (ex. haunted house, sinking ship, snow storm).

Then, each student writes one descriptive, mood setting sentence about that scene.

Each paper is passed around to each other person in the class and each one of them adds a mood-setting detail.

Afterwards a discussion over which scene was most effectively developed is valuable.

Resources and Materials:

Dynamics of Language

"The Artist's Angle" unit

Evaluation:

Comments on use: Students should be encouraged not to depend on elements of plot to make their scenes interesting.

Subject Area(s) Novels (modern)

Unit(s) Reading trends

Objective(s): To become aware of reading trends with environment of students.
Develop awareness of popular books, reading tastes and reading emphasis within
community.

Procedure:

Students decide on a series of questions for a survey to be answered by students, faculty, others in community.

The questions should be guided toward discovering tastes, quantity and quality of reading.

Resources and Materials:

Evaluation:

Comments on use:

Subject Area(s) 8 English

Unit(s) Literature

Objective(s): To improve reading comprehension. To make literature more enjoyable.
To improve self-image.

Procedure:

Begin reading A CT Yankee in King Arthur's Court. As questions arise, divide class into four groups. Distribute work sheets (story-study sheets). Let students record grades on charts as they complete work. Have a test every fifth chapter. Allow time to build King Arthur's castle. Students are held responsible for abstracting information on what castle looks like. Give bonus of 10 percent to the group with the best scores on the test.

Resources and Materials:

Copies of A CT Yankee in King Arthur's Court

Building materials for a castle

Sets of story-study sheets

Chart on bulletin board to record students' grades

Evaluation: Multiple choice test every fifth chapter. Multiple choice vocabulary test every fifth chapter. Working together.

Comments on use: Using this scale: 60% for I, 70% for W, 80% for S, 90% for E, a low class achieved the following: 1/3--S's, 1/3--W's, 1/3--I's.

Subject Area(s) English—Modern Novels

Unit(s) Reviews

Objective(s): To understand and discuss the use of literary techniques and the strengths and weaknesses of various novels.

Procedure:

Select and read novels.

Read several book reviews and summarize them.

After class lectures and discussions on development of literary technique in modern novels (i.e. character development, plot development, setting, theme, style). Students write reviews on the novels they have read. In doing this, they are to use the professionally written reviews as examples.

Resources and Materials:

Newspapers and magazines that include book reviews

Any novel selected by the student to read.

Use of selected stories from The Fractured Image and Life Force for discussion of each aspect of literary technique (plot, character, setting, theme, style).

Use one story to emphasize each aspect.

Evaluation:

Comments on use:

Objective(s): To help the students understand the symbolism, theme, characterization and content of The Red Badge of Courage. To study the court system.

Procedure:

Class discussions on symbols, theme and characters in the novel.

Student-lead discussions on "what is courage" or "what is the purpose of war."

Create in the classroom a trial of Henry Fleming. Although this trial does not appear in the novel, you use the characters in the book to create the trial. Appoint two conflicting personalities as defending and prosecuting attorneys. Give them two or three days to prepare their cases. Assign students to the parts of Henry Fleming, the tall soldier, the loud soldier, the tattered soldier, and Henry's mother. You may expand on small characters such as the farm girl and Henry's girlfriend at home. Have the attorneys work with the witnesses. Assign certain witnesses to work with each attorney. Such as--Prosecution--the tattered soldier, the tall soldier and the farm girl. Defense--Henry's mother, the loud soldier, Henry's girlfriend and Henry Fleming. Assign students to the roles of jury, judge and various roles in a courtroom. Give them two days to research courtroom procedures. The students must stick to the facts in the novel, but some of the characters may be expanded. They can't change the novel, but they can add to it. Go through the trial and let the jury make their own decisions.

Resources and Materials:

The Red Badge of Courage by Stephen Crane

Evaluation:

Comments on use: Students seemed to enjoy the novel much more when they were personally involved.

Subject Area(s) English

Unit(s) Creative Writing

Objective(s): To learn the process of preparing and sending a manuscript for publication.

Procedure:

Notes on spacing and typing a manuscript for publication are given, using the Writer's Market as a source.

Basic Laws of Copyright are covered. The terms for what rights to sell are covered, (i.e., all rights, first serial rights, second serial rights, reprint rights, simultaneous rights, public domain).

How to properly address an envelope is discussed.

After a student has written, then neatly typed his manuscript, he selects a market to send it to along with a SASE.

All possible markets are discussed briefly, students are instructed to read magazines before submitting to them.

Resources and Materials:

Writer's Market

Evaluation:

Comments on use:

Subject Area(s) English

Unit(s) Short Story Writing

Objective(s): To understand the short story. To develop the ability to write a short story.

Procedure:

I develop a procedure booklet for each student with step-by-step instructions and space to complete each step. This booklet is used after we have read and discussed several short stories. Since each step is evaluated by teacher and pupil, the lost feeling that often accompanies the assignment to write a short story does not develop.

The first step is a memory probe. Each student lists strong memories--either incidents or people--that have had special significance. Each memory is described. The student is then asked to isolate the feelings associated with the time remembered. These feelings are listed in a separate column.

Students then share the incidents and feelings they have written about and working together, zero in on something that might form the basis of a good short story.

Other steps include developing a beginning incident and a climax, creating a theme, developing plot. (The students build a ladder from the beginning incident to the climax and then expand the ladder.)

Each first draft is corrected using a color code to indicate problems with accuracy, mechanics, economy, wordiness, sentences, or paragraphing. (Some get pretty colorful!) A fellow student also corrects each paper.

After writing a second draft and reading and correcting for theme and plot, a final draft is written.

Evaluation: Each step is evaluated by teacher and pupil. Final product is evaluated by teacher.

Resources and Materials:

Copies of teacher-prepared procedure book--how to write a short story in ten easy steps.

Comments on use:

Excellent

130

Meredith Case

Subject Area(s) English

Unit(s) Crying Out for Justice

Objective(s):

To study the short story. To encourage students to think about justice - past and present. To improve reading skills.

Procedure:

Assign short stories to be read such as: "Trials at Salem" by Stephen Vincent Benet; "Under the Lion's Paw," by Hamlin Garland; "Testimony of Trees" by Jesse Stuart; and "The Lottery" by Shirley Jackson.

Have the students act out the one-act play "The Lottery" then stage a real lottery in which no one knows who will draw the black dot. After one student has drawn the black dot--have the other students decide how to kill this person. A discussion about how the person felt should follow.

Resources and Materials:

Evaluation:

Comments on use:

Subject Area(s) English

Unit(s) Poetry

Objective(s): To understand the nature of poetry. To appreciate poetry.

Procedures:

Read ten poems of different types aloud.

Distribute handbooks—"What is Poetry."

Class discussion based on ten poems and handbooks.

Write first draft of poems.

Have "buddy" correct.

Write second draft.

Have teacher correct.

Read to class.

Class comment.

Submit best poems to National Scholastic contest.

Resources and Materials:

Ten selected poems

30 copies teacher-prepared handbook, "What is Poetry" containing information about poetry areas listing steps for writing poem with space to complete each step.

Evaluation: Check poetry for scanning. Analyze poetry for other qualities of good poetry.

Comments on use: Very successful. Ten entries submitted to National Scholastic. Two students participated in original poetry contest (reading).

Subject Area(s) Journalism

Unit(s) Introduction

Objective(s): Assesses personal values in terms of subject area (journalism).

Procedure:

Make a list of your individual values that arise from your basic human needs as related to journalism.

Explain how each of these needs can be met in journalism by you, by the instructor and by the class.

Resources and Materials:

Paper
Pen
Silence
Concentration

Evaluation: Make a chart relating your individual values arising from basic human need. Explain how these needs can be met by you, the class, the instructor.

Comments on use: Excellent result from standpoint of relating class to self and setting personal objectives.

Objective(s): To help the student understand the different types of newspaper writing using Silas Marner as a source material.

Procedure:

Divide the class into groups appointing an "editor" for each group.

Divide the novel into sections according to the time elements involved and assign the sections to the groups.

Spend time studying the different parts of the newspaper, the style of writing, advertising techniques and any other things you find to be relevant.

Have the groups decide what they wish to include in their papers. The editor will delegate responsibilities as to the writing and producing of the paper. All material will be centered around the specific facts of Silas Marner and of England during that period in history.

Resources and Materials:

Silas Marner by George Eliot
Newspapers

Material on how the newspaper is written

Resource material on England during the period in question

Evaluation: The group's final copies of their paper should show their understanding of newspaper writing.

Comments on use:

Subject Area(s) English

Unit(s) Reading the Newspaper

Objective(s):

To improve reading skills. To acquaint students with the newspaper. To interest students in reading.

Procedure:

Give each student a newspaper. Assign different articles to different students. After reading the articles, have students meet in groups of four or five and discuss their articles. After a week or so of reading the paper every day, the students can attempt writing their own newspaper.

Resources and Materials:

Evaluation:

Comments on use:

Objective(s): To help students become more aware of the techniques used in the field of advertising.

Procedure:

Discuss things that turn buyers on and things that turn buyers off. Have students indicate what advertisements appeal to them and which ones do not. Point out techniques involved.

Have each student develop a new product and then work up a sales promotion packet for his product.

Each packet should include:

- (1) A newspaper or magazine ad
- (2) An ad for classified section of newspaper
- (3) A sales promotion letter
- (4) A 60-second radio or TV commercial
- (5) One other form of advertisement. This could be a billboard, a demonstration, a display (floor or window), or any other type that might be appropriate for the product.

Resources and Materials:

Example of different types of advertising. (Can be brought in by the students)

Evaluation:

Comments on use:

Objective(s): To help students understand proper telephone techniques in the world of business.

Procedure:

Teach basic techniques called for in telephone usage. Could record correct and incorrect procedures for illustration. Show filmstrip if available.

Have each student compose a message to be recorded by person answering phone.

Draw or assign partners. Using the teletrainer, have each pair of students record each others message. It is important that they not read the message before hand.

Resources and Materials:

Teletrainer kit (can be reserved with the Bell Telephone Co.)

Mimeographed copy of a form for recording a telephone message

Filmstrip from Office Worker Series, Interpretive Education entitled "Using the Telephone" (KT JRSR CEN State Fair Community College)

Evaluation: During the conversation, evaluate the techniques utilized. Staple your comments with the recorded message and the original message for final evaluation.

Comments on user:

Objective(s): To develop the ability to use the telephone with ease and poise and to communicate in this manner more accurately.

Procedure:

Draw for partners.

Call a friend for information—perhaps to get an assignment.

Call for directions—perhaps how to get to the park.

Call to ask for a date.

Call in answer to a classified ad (teacher might write ad on board).

Resources and Materials:

Two dummy phones

Evaluation:

Was objective achieved?

Was question expressed clearly to receiver?

Was information clearly communicated?

Comments on user:

Class enjoyed it and grew easy in each other's presence.

Objectives:

To teach students how to work within a group. To give students a more tolerant attitude toward others' opinions and respect their values though they be different from their own. To develop listening skills.

Activities:

Seat students in a circle and begin a round-robin series of self-introductions. The first person introduces himself, spells his last name and gives one fact about himself. The next person must then give all the facts about the person before him before he introduces himself. Continue this process until every member can pronounce and spell the name of every other member of the group and relate a fact about each other. After this task is accomplished, a discussion topic should be assigned to the group. Each group should select someone to take notes on the discussion. Every member must contribute to the discussion at least once on each of the questions to be answered. Each student should write a short report on the discussion.

Have each student write a telegram to another person within the circle containing a message that they think that person would like to hear. After a few minutes telegrams should be collected and passed out to the people for whom they were intended. No one should know who sent the telegrams. The discussion would go around the circle with each person reading his messages and commenting on them with the rest of the class giving their comments also. Discussion: How well does the person sending the telegram know you?

Assign homework project: Students are to think about and then write down their values and where they acquired these values--family, friends, church, and society. Upon class meeting, each student in turn would explain his values and discuss them. A discussion to follow might be: (1) How are your values different from those of your parents? (2) How are your values similar to those of your parents? (3) Who influences you the most on what you value?

Hand out room survival situation. The group is to come to a consensus on the order of importance of the items. The order must be agreed upon by each member before it becomes part of the group decision. Consensus will be difficult to reach. Try as a group, to make each ranking one with which all group members can at least partially agree.

Guidelines:

1. Avoid arguing for your own individual judgments. Try to approach the task on the basis of reasoning.
2. Avoid changing your mind solely for the purpose of reaching an agreement and avoiding conflict.
3. Avoid "conflict reducing" techniques, such as majority vote, averaging, or trading ideas in order to reach decisions.
4. In making decisions, view differences as helpful, rather than unfortunate.
5. Do not seek information outside the group.

Anita Campbell

Moon Survival

Your group represents the crew of a space ship that was scheduled to land at a space station on the lighted surface of the moon. Due to a radar error during powered descent you have landed some 200 miles away from the station. The rugged terrain on which you have landed caused much damage to your ship and equipment and since the survival of each and all depends on your reaching the space station, the most critical items available must be selected for the 200 mile trip. Below are listed the fifteen items left intact and undamaged after the landing. Your task is to order these items in terms of their importance in helping you reach your destination.

Select a group reporter and on the basis of the group's consensus on the importance of the items, place the number 1 in front of the most important items and so on through number 15, the least important.

- ___ Box of matches
- ___ Carton of dehydrated food
- ___ 50-ft. length of rope
- ___ Parachute silk
- ___ Portable heating unit
- ___ Two 45 caliber pistols & cartridge
- ___ Carton of dehydrated milk
- ___ Two 100 lbs. tanks of oxygen
- ___ Stellar map (of moon's constellation)
- ___ Inflatable life raft
- ___ Magnetic compass
- ___ 5 gallons of water
- ___ Signal light
- ___ First-aid kit
- ___ Solar-powered transmitter-receiver

Anita Campbell

Subject Area(s) English

Unit(s) Original Humor (Short Forms):
Analysis

Objective(s): To analyze what creates short forms of humor in order. To develop own skill in creating visual/verbal humor.

Procedure:

Students collect samples of the following types of cartoons

- a. Single frame and cartoon strip
- b. Hero adventure strip and soap opera strip
- c. Newspaper column (humorous)

Spend one or two classes as needed on each type to:

- a. analyze how humor was created (general elements)
- b. analyze specific characteristics of this (one) form of humor

Resources and Materials

Sunday/daily papers
Magazines

Newspaper column, e.g. Erma
Brombeck, Art Buchwald

Draw from teacher's personal
analysis of humor and
students' immediate analysis
of examples they selected.

Evaluation: Leaflet containing class notes and analysis of our samples.

Comments on use: I have not found any particular printed sources for humor elements.

Objective(s): (The following is the specific procedure for the types of humor already listed.)

Single frame and cartoon strip

Procedure: Using a single frame cartoon: In small groups of four or five, share examples explaining <u>why</u> the cartoon is funny. As a group, draw up a list of elements of humor. Groups will combine these lists so that the class will come up with a class guide list of elements of humor. Teacher add elements, examples not covered by students such as: exaggeration/understatement; nonsense elements, such as stupidity, filler, slapstick; contradiction/the unexpected, such as irony, out of time/out of place. Write captions for the photos circulated--as a small group. Test these out on other small groups to see how successful your group was. Using a strip, analyze how the sequence builds up to a "punch line." In small groups, rearrange sequence to change or wreck punch line climax.	Resources and Materials: Samples Single frame/cartooned strips Photos/posters
Evaluation:	

Comments on use:

Subject Area(s) English

Unit(s) Original Humor Type B: Analyzation

Objective(s): Hero adventure/soap opera strips

Procedure:

In small groups, share examples brought to find general elements of humor and to find specific elements for this type of strip.

As a class, draw up a list of specific characteristics. Teacher add elements not covered by students, such as:

Hero adventure

typical situation requiring ACTION

typical hero type

secondary characters (bad guy, victim)

Soap operas

typical situation requiring EMOTION

typical listener/advisor

secondary characters: people with emotional problems

In small groups, plan to act out either a soap opera or a hero adventure (as assigned) for the class to be graded on: (a) how well did the skit illustrate the characteristics of this type of humor? (b) how original was it? (c) how funny was it?

Compare cartooned/acted versions and lead into how this type of humor could be developed into a strictly written form.

Resources and Materials:

Cartooned strips: hero adventure, soap opera

Evaluation:

Comments on use:

Subject Area(s) English

Unit(s) Original Humor: Analyzation

Objective(s): Humorous newspaper column

Procedure:

Read column and decide what general humorous elements are present and what particular changes were made from visual to verbal presentation.

In class discussion, evaluate how effective different techniques, situations, characterizations were to create verbal humor.

Resources and Materials:

Newspaper column--dittoed for student use: e.g. by Erna Brombeck, Art Buchwald, Bill Vaughn, and Richard Armour

Evaluation:

Comments on use:

Subject Area(s) French

Unit(s) Telling Time, #1

Objective(s):

Learn to tell time in French. Learn shapes, colors, plus materials in French.
Learn to listen, hear and follow commands.

Procedure:

In French instruct students to:
Go to blackboard and design a circle marking horizontal and vertical lines.
Choose materials from assortment on table--le papier bleu, un clou, un regle, etc.
Cut out circle; mark it; cut out indicators; mount them and thus make a clock.
Indicate various times on clock according to times given. Raise clock to verify understanding.

Script:

Le premier rang: Allez au tableau noir.
Prenez la craie. Dessinez une cercle.
Mettez une ligne horizontale entre la cercle.
Mettez une ligne verticale entre la cercle.
Dessinez une ligne diagonale de gauche a droit entre la cercle, etc.
Asseyez-vous.

Maintenant debout. Allez a la table. Choisissez un papier bleu, des ciseaux, un clou, un regle, et un papier blanc.

Prenez le papier bleu et les ciseaux. Coupez une cercle. Prenez un style mettez une ligne horizontale entre le cercle. Mettez une ligne verticale entre la cercle. Maintenant, mettez une ligne diagonale de gauche a droit. Mettez un autre ligne diagonale de droit a gauche.
Dessinez le numero 12 en haute de la ligne verticale

Resources and Materials:

Scissors
Colored paper--marked in circles
Brads
Ruler
Pen/marker

Evaluation:

Comments on use:

Subject Area(s) French

Unit(s) Telling Time, #1, p. 2

Objective(s):

Procedure:

Dessinez le numero 6 au but de cette ligne.
Dessinez le numero 3 au droit de la ligne horizontale. Dessinez le numero 9 au gauche de cette ligne. Mettez les numeros 1 et 2 entre les numeros 12 et 3. Mettez les numeros 4 et 5 entre les numeros 3 et 6. Mettez les numeros 7 et 8 entre les numeros 6 et 9. Mettez les numeros 10 et 11 entre les numeros 9 et 12. Mettez un point dans le centre de la cercle.

Prenez le papier blanc. Dessinez deux indicateurs: Un grand indicateur et un petit indicateur.

Coupez-les. Mettez le but de grand indicateur sur le point. Mettez le but de petit indicateur sur le but de grand indicateur. Pousser le clou entre les buts.

Vous avez une horloge.

Tournez le grand indicateur a douze.
Tournez le petit indicateur a trois.
Quelle heure est-il?
Il est trois heures.

Etc.

Resources and Materials:

Evaluation:

Immediate evaluation in the finished product--has it been completed according to instructions? Students may also check themselves as they go along by watching others. The clock provides the same kind of evaluation--students may check their own accuracy and teacher has immediate feedback.

Comments on user:

Excellent for introducing the unit on the telling of time: students are curious about the product, enjoy the challenge of following instructions and are eager to show correct times on clocks in step with their neighbors.

Subject Area(s) French

Unit(s) Telling Time, p. 3

Objective(s): Students learn to tell, hear, read and write time in foreign language.

Procedure:

Construct clock according to instructions using paper, scissors, clips, etc. Make clock correspond to instructions.

Cassette tape airplane and train (terminal).

Students announcing arrivals and departures

Students comprehending cassettes

Read tour brochures and plan day.

Write invitations specifying time.

Resources and Materials:

Large clock for beginning students (hardboard)

Paper, scissors, clips and rulers for making clocks

Realia--tour brochures

Cassette tape

deuxieme livre, ANSCO
A-LM Harcourt Brace

Evaluation: Dictation of time/written dictation corresponding clock to speaker's instructions. Ability to write time. Check oral ability.

Comments on user:

Objective(s):

To become acquainted with people from a different culture, thus broadening student's own perspective and interests, knowledge of country and people. To realize that language is a current, living vehicle for communication. To develop skills in writing with focus on letter writing. To develop skills in translating and acquaint students with use of idiom.

Procedure:

Ordering of pen pals: Students are invited to order pen pals early in the year and are able to specify nationality, sex, age, and interests. Through IYS one will receive two extra pen pals for every ten ordered. These extras will be adopted by the members of the class who have not ordered their own.

Writing of letters: The class is assigned to write a letter of introduction to his/her pen pal in the target language (French) following formula for letter writing. After the rough drafts are corrected and approved, the letters are copied onto airmail stationery. If necessary, envelopes are available. The class might also be provided with stamps or find them available in the classroom.

Incidental vocabulary used: lettre, papier a ecrire, envelopper, l'enveloppe, timbre, le facteur, la boite de poste, par avion, le bureau de poste, la rue.

Facts learned: types of paper to be used in writing airmail letters, stamps, information necessary, basic operation of American and French postal system; location of countries on map, cities, provinces, differences in addressing letters, etc.

Resources and Materials:

International Youth Service
order forms and bulletins

Packet of airmail stationery
and envelopes
Roll of airmail stamps

Map of French-speaking countries
Atlas

Evaluation:

Students are given credit for having completed a letter in French to a specific person; however, I give a few more points to those who have included more detail in correct grammar.

Comments on user:

Students are very enthusiastic about this project and, partially because they feel it is student-initiated, participate eagerly, unanimously.

Objective(s):

The student will be able to write a simple business letter in French; translate a simple business letter; understand the basic format of French business letters, abbreviations, idioms.

Procedure:

Students translate several letters making list of vocabulary peculiar to business concerned; secondly, listing idioms used in typical business letter; thirdly, explaining abbreviations used.

Students compare their translations to those on file.

Students respond to a letter according to the directions given, then compare their response to one on file.

Letters are typed on business stationery.

Resources and Materials:

File of sample business letters (kept current) received from firms in French-speaking countries with focus on France & Canada. Include variety: factories, medical, legal

File of translations and sample responses to letters on file

Business stationery

Typewriters (if available)

Evaluation:

Letters are evaluated according to these criteria: communication of basic information, correct grammar, correct use of idiom, correct use of form, correct spelling, neatness.

Comments on user:

Subject Area(s) French II

Unit(s) Swiss Minidocs

Objective(s):

To study culture (Swiss) in depth (using minidocs as inspiration or starting point).

Procedure:

Assign an in-depth study of one minidoc topic--
written or oral report.

Using criteria for evaluating culture, examine one
or all minidocs: background; artefacts, clothing,
people, attitudes, etc.

Develop a minidoc using (in French) similar
structures.

Resources and Materials:

Minidocs

American-Swiss Association

Evaluation:

Comments on use:

Subject Area(s) French II

Unit(s) Swiss Windows (Mini-documentaries)

Objective(s):

To acquaint students with culture (Swiss) as manifested in television documentary.
To familiarize students with vocabulary. To emphasize construction of complex sentences plus the Ne . . . que construction.

Procedure:

Show film: Window: Jazz, Yodelling, July 4th, William Tell—discuss immediate impressions.

Distribute French script for second showing. Ask students to interpret general meaning, to familiarize themselves with French pronunciation. Point out constructions: (1) C'est une tradition qu'un grand nombre . . . (2) ce n'est qu'un aspect . . . ce n'est que maintenant que le cameraman . . . (3) . . . mais ce, qui compte . . .

Resources and Materials:

Swiss Windows, American-Swiss Association, Inc., 60 East 42 St., New York, NY 10017

Evaluation:

Performance in translating and pronouncing. Self-evaluation: Compare self-taped pronunciation with film and student translation with enclosed transcript in English. Objective test of vocabulary and sentence structure.

Comments on use:

Subject Area(s) French II

Unit(s) Métiers--Various Occupations

Objective(s):

To become acquainted with the names of various occupations and some basic vocabulary connected with each career. To inventory self in regard to careers. To relate occupations with need for foreign language.

Procedure:

Self-inventories: Les Emplois et Vous; Qu'est-ce que vous aimez faire?

Articles:

Quand êtes-vous heureux? Passepartout Se/Oct 69,
Le Travail C'est La Santé. Ca Va Jan. 73,
Presentation of métiers: Show pictures of different occupations emphasizing some plus vocabulary of profession--relate to foreign language occupations--all in French.

Role playing different occupations.

Matching pictures with dialog or job descriptions.

Bulletin board--Famous people in occupations requiring foreign language. Word games/puzzles.

Lisez un journal du Canada, de France, etc.

Trouvez (les) pour quelques métiers.

Choisissez un métier et faites une liste de vocabulaire nécessaire

Resources and Materials:

Kit:

When I Grow Up, I Want to Be . . .

Subject Area(s) French II

Unit(s) A Second Language Opens Many Doors--
Research Project

Objective(s):

To initiate awareness of language as a tool to self-development. To acquaint students with available opportunities. To show students values in foreign language study--specifically, monetary value.

Procedure:

Research Projects:

Choose 1 - 4 - 5 weeks usually first quarter.

List of jobs available in foreign country and/or requiring a second language--mounted display notebook collection (30 points)

Report of approximately 1000-1500 words on one specific bi-lingual job or study opportunity or one career with emphasis on value of foreign language. (40 points)

Research paper of approximately 1500-3000 words (3 sources): study abroad; one or several careers in the field of foreign language; service abroad (missionary work, Action); A.F.S. and other opportunities for student travel. (50 points)

Resources and Materials:

Casewit, Curtis W. How To Get a Job Overseas, ARCO Publishing Co., New York

James, Charles J. The Directory of Overseas Summer Jobs

Evaluation:

Evaluate on point basis (which might vary from listing above) according to criteria for research paper: organization, documentation, complete bibliography, content.

Comments on use:

I keep resulting products on file for further discussion throughout year, for others to share as interests shift, for sources for other projects.

Subject Area(s) French II

Unit(s) A Second Language Opens Many Doors:
Research Project

Objective(s):

Introduce various articles and materials useful in future research project. To acquaint students with opportunities available as a result of studying a foreign language.

Procedure:

Introduction: Activity 1:

Choose one field: medicine, law, teaching, dramatics, business, etc.

Perusing materials, articles available, list five ways a foreign language can be an asset in this field.

Discussion of findings--How can language study lead to finding better jobs? What jobs require a language? What are college requirements in foreign language area? Why study a foreign language?

Resources and Materials:

"It's a Shrinking World," Accent on ACTFL, Sept. 73

Walser, F. Leroy, "Career Education Holds FL Challenge" Accent on ACTFL, Sept. 73

Mericlein, Helmut A. & Georges Cooley, "International Business Without Foreign Languages?"

Accent on ACTFL, Sept./Nov. 74

Carney, Helen, "Developing a Dialogue about Careers," Accent on ACTFL, Sept./Nov. 74

Lester, Kenneth A. "The Career Crisis," Accent on ACTFL, No. 75

Johnson, Teresa; Taub, Alice Kent, A Foreign Language: A Key Asset, Dept. of Modern Languages, St. Louis Univ., St. Louis, MO, 1975 (75c)

Evaluation:

Since this is an introductory activity, evaluation is in the final research paper; however, I evaluate this on these criteria: Does student participate in discussion? Has he completed the listing? Point system.

Comments on use:

Usually evokes response from class and the discussion seems to inform members of class. Also, has been good to follow up project with similar discussion.

Subject, Area(s) French II

Unit(s) A Second Language Opens Many Doors:
Research Project

Objective(s):

To show students that jobs using a foreign language are available. To acquaint students with the sources for finding these jobs. To acquaint students with job ads in English and in target language.

Procedure:

Introduction: Activity 2

Look through magazines, newspapers to find at least 1 to 3 available jobs demanding a knowledge of foreign language or sojourn in foreign country.

Mount on paper listing source of want ad plus translation if necessary or copy if impossible to cut out.

Post on bulletin board.

Resources and Materials:

Canadian Newspapers in French and English: Montreal, Quebec, Toronto

French newspapers

Papers from French-speaking countries

Christian-Science Monitor

New York Times

Wall Street Journal

Business magazines such as

Forbes, Fortune

Travel magazines such as Holiday Inn magazine

U. S. Civil Service brochures

Trade journals

Evaluation:

Has student completed project according to specifications? I give credit points for finished job.

Comments on use:

Allows student to share information and helps them to start thinking about a research project.

Objective(s):

To acquaint students with media and commercials from another country. To understand a culture through advertising. To develop advertising selling a product in French. To become familiar with imperative structures.

Procedure:

Film--Students discuss criteria for evaluating advertising.

Students watch films and discuss according to these criteria: products, prices, background, music, artefacts, psychological approach, with the idea of developing a paper, comparing one commercial to an American commercial for similar product.

Students become familiar with vocabulary and pronunciation of commercials so that they can "dub in" sound track.

Follow-up activities: Students develop their own commercial (or lay-out for advertising) which will sell an American product in France (or Switzerland). Use imperative.

Students prepare salestalk in French persuading a Swiss or French person to buy an American product.

Resources and Materials:

American-Swiss Association, Inc.
60 East 42 Street, New York,
NY 10017

Film: "Language in the Marketplace" (a series of commercials, script, criteria for evaluating advertising, bibliography)

Evaluation:

Paper evaluated on organization; completeness.

Comments on use:

Students are interested in films and discussions and enjoy developing follow-up activities.

Subject Area(s) Homemaking

Unit(s) Clothing - Creative Costume

Objective(s): Student demonstrate ability to make their own pattern. Student develops a leisure time activity.

Procedure:

Use basic pattern and then design a garment.
Cut all pieces of pattern needed.

Make trial garment before final garment.

Have local designer discuss vocation and need for training.

Make transparencies of before and after pattern in preparation for public appearance of students.

Resources and Materials

Flat Pattern Design by Hallen

Local department store for merchandise as well as fashion trends

Evaluation: Students make checklist to be used for garment.

Comments on use: Students commented--they really learned fitting techniques needed in the making of any garment. Most students do not want to take the time for this course. In other words, their creative spirit has not been sparked.

Subject Area(s) Home Economics

Unit(s) Clothing - Creative Costume

Objective(s): Student demonstrates an ability to work in stage costume designing.

Procedure:

Secure cooperation of school production department (drama, music, etc.) to allow students to design a costume, perhaps not make 50 of each, but at least learn difference between stage costuming and fashion wear.

Resources and Materials:

A speaker from Lyceum
Theater costume department

Text

Evaluation: Parents who saw production could evaluate costuming. Students develop checklist.

Comments on use: For only the very interested select few students.

Subject Area(s) Home Economics

Unit(s) Housing - Furniture Renovation

Objective(s): To develop an appreciation for construction and finishing of furniture.

Procedure:

Select a piece of furniture to be restored

Discuss use of this skill as a part- or full-time business.

Resources and Materials:

Pamphlets:

"Forney's Tips on Furniture Repair and Care"

U. S. D. A. -- "Refinishing Furniture"

Local person—one who does refinishing, upholstering, etc.,

McGinnis Upholstery Shop
Sarah's Shop, Blackwater
Industrial arts teacher

Evaluation: Grade individual projects.

Comments on use: Students enjoy this but very time consuming for school.

Objective(s): To develop an awareness of kinds of services available for care of children. To develop an attitude of service rather than just observation toward these institutions.

Procedures:

Arrange a trip to the following centers--

Day Care Center

Malita Day

Winnemilla

Disadvantaged students

State School #21

Children's Therapy Center

Sheltered Workshop

Pre-nursery schools

Nursery schools-

Public

Private.

Public Kindergarten

Take a gift (food made by students or a game to use, etc.) to each center.

Following field trip, take time to discuss jobs available at these centers and explore what each person's job includes--training needed as well as actual responsibilities.

Resources and Materials:

Supervisors in each center

Evaluation: Students write an evaluation of trip--partly structured by list handled out before trip.

Comments of use: Students talk about it for many years later.

Objective(s): The student will become aware of responsibilities of operating a business. The student will be able to know and practice social graces.

Procedure:

Organized class into a company with president, vice-president, etc., advertising, etc. Each student was responsible for making items to be sold in our "boutique" shop called "La Tienda." Students were paid for cost and some for labor. Profit from shop was used to take class out to a meal, where the students practiced good manners learned in personal culture class.

Resources and Materials:

Charm—Chapter on dining out

Harold Richardson, SPOC, spoke several times on setting up displays, advertising, and marketing.

Evaluation:

Comments on use: I am not sure this activity belonged in this unit, but it could be used with any money unit, etc. Perhaps it took a little too much time.

LA TIENDA

(The Store)

An Adventure in Merchandising

Objectives

1. To learn some techniques of managing a business.
2. To finance a class dinner to practice "eating-out" skills learned in Personal Culture Class, a semester course in home economics.
3. To be creative in crafts.
4. To realize profit on basis of individual production.
5. To inform and communicate with customers.
6. To keep records, individual as well as for the business.
7. To work together for a common goal.
8. To gain experience with different careers--advertising, managing, selling, bookkeeping.

An Adventure in Merchandising

Introduction

This group experience was actually an outgrowth of a unit in Personal Culture Class on Restaurant Dining as related to the social graces used in the world of work.

The fifteen girls of tenth, eleventh, and twelfth grades wanted to "eat-out" but needed money to finance the undertaking. The class decided to earn the money by having their own business, selling handmade items, such as clothing, crafts, food and kits for the "do-it-yourself" enthusiast.

Place

Approval was secured from the school administration to proceed with the project away from the school premises, hoping to work with more people. This meant that our students would be going off campus each day to work on the project. A local Community Center on Main Street of town offered the use of their building free of charge. Incidentally, this center was not in use and needed much clean-up.

Organization

An organization was needed to operate the new business. Qualities needed by persons who would hold the various offices were discussed by the class and then the class selected the following officers: manager, assistant manager, and treasurer. Committees chosen were advertising, production, and display.

Theme

A Spanish theme was chosen, thus the name La Tienda, Spanish for "The Store." Many students were enrolled in Spanish classes also. The decor of

the store was to reflect the Spanish influence. Signs were in both languages, customs were carried out, and costumes depicting that culture were used.

Hours

The store was to remain open for three days after school, 4 p.m. - 7 p.m., and all day on Saturday, 10 a.m. - 4 p.m. Poor lighting in the building accounted for the early closing hours and, also, this conformed to the rest of the town's store hours.

Finances

Students voluntarily chose what items they wished to mass produce so they realize some reimbursements for their labor. The class voted that each student could produce as much of any one item and as many different items as they thought would sell and they had time to produce. They were asked to keep a record of the number of items offered for sale, the cost to produce, and ascertain the selling cost in order to determine the amount of profit realized. The organization decided to return one-half of amount realized from each student's total sales to the student and the other one-half was left for the "eating-out" experience. After all expenses were paid, each girl had \$6.45 to spend as she chose for the dinner.

Tagging Merchandise

Individual student's items were coded with student's three initials, so cashier and treasurer could complete the bookkeeping task. Each item sold was written on a sales ticket with the code of item listed. Persons making the sale also initialed sales ticket, in case of error in addition. An adding machine was used to eliminate errors.

Advertising

Among the class, perhaps the busiest group were the advertising committee members. A month before the opening date, large windows of the building were covered with paper advertising the coming of a new business. Eventually the name of the business was painted on those windows. The local newspaper gave a full page ad, spot announcements were made on local radio, handbills were distributed to students at school and posted in business houses in neighboring towns, and the officers were interviewed on a local radio station - all to promote interest. Copies of advertising are enclosed.

Program

Opening-day ceremony included ribbon-cutting by the Mayor Pro tem, the principal of the school and officers of the store.

A pinata was constructed and filled with small toys and goodies. This was broken by the "small-fry" customers as a part of the opening-day ceremony.

To stimulate interest, a craft demonstration by a local craft shop employee was scheduled for one evening.

On the last day in the morning, a cake decorating demonstration was given by a local homemaker proficient in that art. The cake was then given to the person whose name was drawn from among the customers who had visited the store during its operation.

Cooperation

The local merchants were enthusiastic for the new business. One placed his merchandise on consignment for additional profit for the store. The local banker visited the store daily and commented on the value of the experience of the store to the students and to the community.

State Fair Community College Marketing Specialist discussed principles of merchandising, display methods, and floor layouts with the students during the planning sessions. Audiovisual Specialist, also from State Fair Community College provided a progress report in slides for the project, beginning with the building clean-up, through classroom work, ribbon-cutting ceremony to the final dinner party.

Observations

Although the store did not sell out of merchandise, more variety of merchandise could have been offered for sale. The girls observed quite easily what kind of merchandise their customers wanted and even produced some of those items after daily closing hours.

Students worked outside of regular class time on the items for the sale, but about four weeks of class time was utilized for this project.

Some girls assembled items for a project, wrote the directions for making the item, and sold the results as a "do-it-yourself" project. Creativity was encouraged by this type of project both on the part of the seller and also to allow the buyer some freedom of expression.

To attract more customers, students prepared to sell coffee and lemonade along with food items to be eaten while browsing in the store. The town has no restaurant service during the store hours. This was not successful, however, possibly due to inadequate facilities.

Comments

The superintendent of schools put short a trip to the lake to patronize the business before closing time. He was impressed with the character of the operation.

The principal commented that it was a successful, valuable learning experience and wished more of this type of learning could be initiated.

One special education student enrolled in the class operated the adding machine as a cashier with accuracy and a real sense of accomplishment for her.

The teacher felt it was a real stimulant to interest in the classroom. Some teachers perhaps would not like to allot that much time to such an activity. This was an especially cooperative class and time well spent according to the teacher.

One merchant in town commented on the value of this experience to his business, as well as a practical learning experience.

Because of the popularity of some of the items sold, girls took orders for future delivery - perhaps the start of their own business.

Slide Presentation

A set of slides depicting progress of La Tienda with narration by the student manager is available from the State Fair Community College Library.

Evaluation

Each officer and committee was asked to keep a folder of materials used and then to evaluate the value of each.

At the end of the project, each student was asked to write an evaluation of this endeavor. The form of this evaluation was not structured in any way, but each student related what this experience had meant personally. Some felt they had learned to meet the public better; others liked the profit they had realized themselves; and, of course, all liked the dinner party. No formal written test was administered.

LA TIENDA WORK SCHEDULE

Wednesday

3:30 to 5 - 5 to 7:30

Tami	Kim
Jana	Pat

Thursday

3:30 to 5 - 5 to 7:30

Mary	Diann
Chris	Peggy

Friday

3:30 to 5 - 5 to 7:30

Connie	Nancy
Donna	Barbara

Saturday

9:30 to 12:00

Pat
Kim
Tami
Jana

12:00 to 2:00

Donna
Connie
Barbara
Sherry

2:00 to 4:30

Mary
Chris
Diann
Peggy

4:30 to 6:00

EVERYBODY CLEAN UP!

Cindy and Vanita will be there all the time. Be sure to contact one of us if you can't work your scheduled time.

GOOD LUCK!!!!

INDIVIDUAL STUDENT RECORD OF ITEMS OFFERED FOR SALE

\$7.50

LA TIENDA (THE STORE)

Where: UCCI Bldg.
Main Street
Smithton, MO

Dates of Operation:
Apr. 23 - 4-7 p.m.
Apr. 24 - 4-7 p.m.
Apr. 25 - 4-7 p.m.
Apr. 26 - 10-4

Owners: Personal Culture
Class
Smithton High School

WELCOME

Special Features:
Macrame Craft Demonstration
Thurs. Apr. 24 6:30 p.m.

Cake Decoration:
(drawing for cake)
Sat. Apr. 26 10 a.m.

Manager: Cindy Moon
Asst. Manager: Vanita Southard

OFFERS THE FOLLOWING ITEMS FOR SALE:

- * Wood and leather jewelry
- * Pajama Bags
- * Hanging Planters
(also do your own kits)
- * Summer Skirts
- * Pillows
- * Homemade food products
- * Aprons
- * Pot Holders
(variety of colors and sizes)
- * Soap Baskets
- * Dresser Scarf
- * Live plants for the person with a green thumb
- * Decorative Candle Holders
- * Paper Flowers
- * Creative Crewel Embroidery
- * Clean-up turtles
- * Terrariums (many sizes and shapes)
- * Decoupage items, plaques
- * Many other items too numerous to mention

GRAND OPENING--Wed. Apr. 23

Help us break the PINATA with prizes for all

COME-N-BROWSE

COME-N-BUY

COME-N-BROWSE

COME-N-BUY

April 18, 1975

KQOS-TV
2100 West Broadway
Sedalia, MO 65301

Dear Sir:

Our personal culture class would appreciate you announcing on television about our shop called La Tienda, which stands for "The Shop." Please tell that it is all homemade goods, even food. Store hours will be April 23 to 26, weekdays 4:00 p.m. to 7:00 p.m. and on Saturday from 10:00 a.m. to 4:00 p.m. It is located on Main Street in Smithton at the UCCI building. Grand opening will consist of a pinata breaking for all ages of children.

Sincerely yours,

Jana Green
Advertising Manager
Smithton Personal Culture Class
Smithton High School

THE LA TIENDA IS A SHOP RUN BY GIRLS TAKING A PERSONAL CULTURE CLASS AT SMITHSON HIGH SCHOOL. IT WILL BE FULL OF DELIGHTS AND HOMEMADE SURPRISES. IF YOU WANT TO BUY THINGS WITH THE "PERSONAL" TOUCH, COME TO OUR SHOP AND SEE.

THE LA TIENDA WILL BE AT THE UCCI BUILDING ON MAIN STREET, SMITHSON. IT WILL BE OPEN WEDNESDAY THROUGH SATURDAY, APRIL 23 TO 26.

SHOP HOURS: WEDNESDAY, APRIL 23, 4-7 P.M.

THURSDAY, APRIL 24, 4-7 P.M.

FRIDAY, APRIL 25, 4-7 P.M.

SATURDAY, APRIL 26, 10 A.M.-4 P.M.

MANAGER: CINDY MOON

ASST. MANAGER: VANITA SOUTHEARD

Subject Area(s) Math

Unit(s) Estimating Area of Land

Objective(s): To give students a "feeling" for the amount of land included in an acre (hectare).

Procedure:

Have students gather any outside materials which give the area of some familiar section of land. Examine information in class in an effort to give students a reliable and memorable mental reference as to the extent of an acre (hectare). For example, define an acre as the patch of ground enclosed in a square whose sides have length equal to the distance from the goal line to the opposite 30 yard line on a football field.

Resources and Material:

Evaluation: Here it is not essential that students know exactly (sq. yds., sq. m., etc.) what an acre (hectare) is but rather that they develop a "feeling" for this area by relying on mental pictures of known areas.

Comments on use:

Subject Area(s) Math

Unit(s) Math in Wildlife Management

Objective(s): To give students an opportunity to sort out relevant data and arrive at meaningful conclusions from various statistical data.

Procedure:

Have students examine resource material in search of data regarding a particular wildlife situation, i.e., deer kill during a particular hunting season. Have students make a list of questions which could be answered by data, i.e., "How many hunters purchased deer tags?" Use data to arrive at answers to questions involving percentages, probability, etc.

Resources and Materials:

Pamphlets from Mo. Dept. of Conservation
Missouri Conservationist
Field and Stream
Outdoor Life
Sports and outdoor columns from newspapers

Evaluation: Attempt to evaluate students' use of data by use of essay questions such as "What data is needed to find answer to . . .?" Evaluate math skills by checking work on use of data to arrive at conclusions.

Comments on use:

Subject Area(s) Math

Unit(s) Math in Sports

Objective(s): Give students opportunity to gather their own data and use it to draw conclusions.

Procedure:

Have students record data from a sporting event such as a school game or professional event. Give students in advance some examples of what sort of data to record: points, turnovers, fouls, field goals in a basketball game. Do not spell out specifically what students should record.

Have students evaluate one team's performance using the data in an effort to determine what was most meaningful factor in the team's win (loss).

Resources and Materials:

Evaluation: Compare and contrast students' and your statistical evaluations.

Comments on use:

Subject Area(s) Algebra I

Unit(s) Ratio and Proportion

Objective(s): To encourage students to find applications of algebra in solving household (business, etc.) problems.

Procedure:

Have students hand in "recipes" one day in advance. Tell the students when "recipes" are returned that a situation has arisen in which more (less) of one material has become available. Their job now is to rewrite their "recipe" so that the finished product is the original "recipe" but was built with more (less) material.

Resources and Materials:

Each student brings one "recipe" (might be cooking, instructions for building a model, etc.)

Evaluation: Check accuracy of proportions.

Comments on use:

Objective(s):

To illustrate that two changing quantities may remain in a relationship of equality while changing. To illustrate how adding or subtracting equal numbers will maintain an equality relationship while exposing an unknown quantity.

Procedure:

Place the pebble on end of the stick along with 3 coins of the same denomination. Place enough like coins on the other end to balance. Point out the analogy between the fulcrum point and the = sign. Take one coin from each side and note that the balance is undisturbed (i.e. both sides still =). Continue this until the pebble remains alone balanced by the remaining coins. The balance (equation) has been preserved while finding what weight in coins corresponded to the pebble. Using different weight coins will illustrate what happens when unequal numbers are subtracted from each side and that the weight of the pebble cannot be determined. Reverse the process for the addition property.

Resources and Material

A flat stick, for example a popsicle stick
Several coins with several denominations represented by several coins
A small pebble

Evaluation:

Comments on use:

Subject Area(s) Math

Unit(s) Logic

Objective(s): To analyze statements and draw logical conclusions. Hopefully, this will help students analyze arguments, advertisements, etc. leading to analyzing mathematical statements and drawing correct conclusions.

Procedure:

Have students find an advertisement that heavily appeals to being successful, beautiful, sexy, etc. if you use the product. Then have students break down the ad into assumptions made and conclusions which logically follow.

Have students find campaign or political speeches. You may just use an excerpt from one. Break down the speech into separate parts and analyze each by judging suppositions and conclusions. Also judge what type of appeal is used.

Resources and Materials:

Magazines and/or newspapers

Magazines and/or newspapers

Evaluation:

Comments on user:

181

Subject Area(s) Math

Unit(s) Metric

Objective(s): To estimate size of items using metric units, especially linear units.
To measure items estimated using meter sticks, tapes, etc.

Procedure:

Divide class into two teams. Have one student from each team go to board and draw lines a given length (such as 1 m, 40 cm, etc.) or give an estimate of items in the classroom in specified units (height of doorway in cm, height of tallest boy in cm, width of room in m, etc.).

Then have the two students, measure the item(s) and point goes to team having closest answer.

Resources and Material:

Chalkboard
Watch with second hand (optional)
Meter sticks and/or tapes

Evaluation: Students enjoy this since even the best students do about the same as the poorer ones.

Comments on use: You may need to set a time limit for answers (10-15 sec.). Can also be used with metric weight (mass) or capacity, but not as effective.

Subject Area(s) Math

Unit(s) Metric

Objective(s): To learn the basic units of the metric system.

Procedure:

Write the 7 basic units on cards (approx. 13 cm x 18 cm). It is best to begin with linear units or with the symbols for them (km, hm, dam, m, dm, cm, mm). Give them to 7 students and have them arrange themselves from smallest to largest. It's fun to give them to the students without them knowing what their own card says (pin them on their back) and have them arrange themselves.

Resources and Materials:

Cards (5" x 7")
Magic marker
Straight pins—optional

Evaluation: Works well with junior high students during first day or two of metric study.

Comments on use: Can adopt this to units for mass (weight) and capacity. Could be adopted to measures such as 17 cm, 175 mm, 1.7 m, etc.

Many of the following activities could be acceptable at any upper elementary level through high school (grade 12). Some (such as repair of instruments) would be more acceptable in a fundamentals class. This, however, would be good for all instrumentalists due to the fact that somewhere in their instrumental career they will undoubtedly have mechanical problems with their instruments. Many times minor adjustments could easily be made by the student who would thus save money.

Several of these activities (such as decorating for concerts) would be possible only if you have the time or are artistically inclined.

Many activities can be culminated in one or two days; however, researching and reporting activities as well as instrument repair activities would obviously take several days.

Hopefully, you could develop some of these ideas with different activities and also keep the monotony in the classroom from becoming standard day after day.

Subject Area(s) Music

Unit(s) _____

Objective(s):

The student will become aware of the requirements necessary to open and maintain a successful business.

Procedure:

Place a student in an apprenticeship to an existing dealer, maybe for a week or month, or at least a day.

Establish a reputation as a competent repairman or reliable source of information.

Eventually, be accepted as a member of Dunn Bradstreet credit union. They will back you on orders or shipments (can be over \$10,000/shipment) and other sponsors.

Draw up physical plans for the ideal music store. Include all areas of music, pianos, instruments, showcases, etc., catalog orders for music, and lesson areas.

Resources and Materials:

Information

Carl Wilken, Wilken Music,
Sedalia, Missouri

Evaluation:

This would be a very long term project, which requires much time, patience, and a reputation of competence which eventually gains you support of dealers and sponsors.

Comments on use:

Subject Area(s) Elementary Music

Unit(s) _____

Objective(s):

To become aware of the construction of stringed instruments as a career.

Procedure:

History of Stradivarius and Guarneri instruments, present day value.

Structure and parts orientation.

Information on what makes a string instrument work.

Assign students to make a string instrument and play them.

A professional person to come and play and demonstrate.

Have students try to play, to see the technical facility it requires to play.

Have a violin builder come and show how to build, tools required, instruments in various stages of building (beginning to finished product).

Resources and Materials:

Any music history book

Milton Cross History

Appel Dictionary of Music

Violin, viola, cello, bass and bows for each

Pictures on each if above isn't available

Mr. & Mrs. Banning from St. Louis appear at the Arts and Crafts Fair at Arrow Rock each year. He builds violins and she demonstrates.

Evaluation:

Comments on use:

Subject Area(s) Elementary Music

Unit(s) _____

Objective(s):

The student will relate art and music by starting with a recording and animating cartoons, filmstrips, based on it.

Procedure:

Teach songs for elementary classes by having students sing the song while the teacher draws the stories on the board with pictures. Students could also do the illustrations.

Example: Frosty the Snowman, The Twelve Days of Christmas

For older students they can learn to draw and listen to recordings with which they are unfamiliar, incorporating impressionism in music.

Actual filmstrips or films could be developed—might be done in conjunction with art class if art teacher is interested.

Resources and Materials:

Music and words
Recordings of the songs are most helpful
Chalkboard-chalk
Knowledge of the song and story

Evaluation:

Comments on use:

This is fun for the students as well as a teacher who likes to draw. Sometimes, however, they get more interested in the pictures that you draw and forget to sing. This is a good outlet for students who also are not involved in an art program.

Subject Area(s) Music

Unit(s) _____

Objective(s):

Awareness by students of the people and occupations by observing theatrical productions from beginning to end.

Procedure:

Follow a production from beginning to end--tryouts, rehearsals, etc.--performance.

- a. actors
- b. directors
- c. designers

Have various members of cast talk to class to explain their roles in the production.

Resources and Materials:

Books on drama and theater from your library.

People involved in production

Stagestruck: Your Career in Theater, Hirschfeld New York Messner, 1963

Evaluation:

The students will evaluate the whole production and how each person's role affects the overall effort.

Comments on user:

Subject Area(s) Music

Unit(s) _____

Objective(s):

The student will be aware of how personalities and attitudes stabilize job positions.
Children's personalities relating to the world of work.

Procedure:

Sing songs affecting different attitudes and behaviors and expressions.

Make a bulletin board showing different occupations.

Stress how people and jobs in these areas are different.

Discussion of jobs in music and problems which could arise, role playing.

Resources and Materials:

Brother John, Warner Brothers

Ideas, Thoughts, and Feelings,
album, L.P. \$6.95

Allyn & Bacon, Human Relations
Development, G. W. Casda,
\$6.95

Your Emotions Intermediate,
filmstrip, cassette, United
Learning, 6633 West Howard
Street, Niles, IL 60648

Evaluation:

Comments on user:

Objective(s):

To become aware of the requirements and training of a piano technician.

Procedure:

Have a tuner work on a piano in a classroom in view of the students.

Actual attempt to tune a string by students.

Explanation of tools and use.

Explanation of structure and parts of a piano.

Explanation of technician school for tuning career by a licensed accredited tuner.

Resources and Materials:

Sedalia piano tuners: George Young, Mike Hooks, Jim W. Cramer

Brochures by Piano Tuners Guild

Evaluation:

Comments on user:

I have done this. Some of the students were amazed at how complicated tuning a piano can be, also how delicate the inside parts actually are.

Subject Area(s) Music

Unit(s) _____

Objective(s):

Understand and be aware of the requirements of a good private music teacher.

Procedure:

Have a private teacher attend classes or schedule an afterschool assembly.

Talk about the costs of private lessons for a non-professional teacher as opposed to a professional private teacher in terms of guilds and unions.

Problems in scheduling for students, problems like school ball games, jobs.

Allow some advanced students to take on lessons with supervision.

Resources and Materials:

Evaluation:

Comments on user:

I have students giving lessons for \$1 per lesson. Gives them more pride and helps lighten the load in beginner band.

Subject Area(s) Music

Unit(s) _____

Objective(s):

The student will become aware of his community and his musical heritage.

Procedure:

Field trip to Lyceum Theater Arrow Rock.

Students participating in summer theater at Arrow Rock.

Organizing and setting up a production in your own school.

Getting the assistance of drama, art, and home economics departments.

Attending community musicals or plays.

Study folklore of the area, things that have happened; find songs that relate to subject area.
e.g. Lard Hill, Graven Ridge, MO Railroad (M.K.T.) kills some hogs belonging to widow. R. R. will not pay for hogs. She and her kids grease an uphill grade on tracks every night until payment is made. Hogs? The Sow That Took the Measles.

The students might develop plans to restore old historical buildings in the community--e.g. an old opera house, etc.

Search out and visit the buildings.

Resources and Materials:

History and theater books of dress, music and decoration of the periods

Book of the Theater of Yesteryear, Doubleday

J. C. Penney Bicentennial Music, 1975

Evaluation:

Comments on use: _____

Objective(s):

Students shall learn to develop a theme, organize music developing the theme, and develop decorating ideas around the theme.

Procedure:

Explain to the students the types of concerts (oratorios, cantatas, etc. or any less formal concerts).

Select type of music and concert to be performed.

Design decorations correlating the music and the theme.

Students will actually carry out and decorate the area of the concert.

Resources and Materials:

Cooperation of art department

Lots of cardboard, paint, junk lumber

Band Director's Guide

Doubleday Book of the Theater

Evaluation:

Comments on use:

Don't get bogged down on the decorations. The music should come first and foremost.

Objective(s):

Students will become aware of the different musical styles that a teacher must be able to present and changes in musical styles that occur through the years.

Procedure:

Research school music programs of past years.
Interview with older or retired music teachers.
Interview with a more recent graduate music teacher and discover the styles of music used in their concerts.

Prepare and perform music suggested by M.E.N.C. contest lists.

Prepare and perform music recognized as more popular of the day.

Compare and contrast the selections and performances.

Resources and Materials:

Records and music of rock and roll era

Electronic equipment
Synthesizers, electric guitars, amplifiers

Music of hard rock

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students will become aware of the historical progression of music as it relates to national or world events.

Procedure:

Working knowledge of classical selections.

Students will study and chart music of eras and styles and characteristics of each era.

Music lists from each era.

Reading articles from professional journals.

Resources and Materials:

Viewing of 2001, A Space Odyssey

Grant, History of Music

M.E.N.C. Magazines, Missouri School of Music Magazine

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

To explore music therapy in relation to therapeutic arts of the exceptional child.

Procedure:

Discuss:

- A. Requirements for a degree in music therapy
- B. Personal requirements
- C. What is N.A.M.T.
National Association of Music Therapy--
Representative will visit.

Take a field trip to State School at Marshall.

If possible, include actual working with exceptional child, deaf children, etc.

Resource and Materials:

Catalogs from colleges
developing this area

Civil Service or employment
offices

N.A.M.T., P.O. Box 610,
Lawrence, KS

Journal of Music Therapy to
be ordered from above

Evaluation:

This would be good for anyone interested in physical education or special education and music. Sedalia has a part-time music therapist--Gwen Kappelman--La Monte, MO.

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

The student shall learn the value of a poet's work and how it could be set to someone's music.

Procedure:

The students will set an existing poem to music and/or write a poem to existing music.

Research poets or writers whose works (poetry or prose) have been set to music.

Resources and Materials:

Elizabeth Barrett Browning:
How Do I Love Thee, G.
Schirmer
Any prose or poetry books

Evaluation:

Comments on use:

Objective(s):

The child will become aware of the requirements of becoming a professional instrumentalist.

Procedure:

Field trip to St. Louis or Kansas City Philharmonica.

To sit and work with a professional on a piece of music.

To sit in on a lesson with a teacher and a private student.

To allow advanced students to work with younger or beginner students. Have professional groups appear for the student body.

Have a music union official talk with the interested students on costs of unions, advantages of organized unions and disadvantages.

Breakdown of the areas of specialization in instrumental areas.

Requirements for these areas.

Salaries and opportunities.

Resources and Materials:

Career in Music Education,
Charles Gary, M.E.N.C.,
Washington, 1965

Careers & Opportunities in
Music, Alan Rich, New York,
Dalton, 1964

Evaluation:

Comments on use:

I allow students to work with younger or beginner students now. It sometimes seems like the students relate better than between teacher and student.

Subject Area(s) Music

Unit(s) _____

Objective(s):

The children shall become aware of interaction of jobs in music and a radio station.

Procedure:

Disc jockey will visit class.

Discussion of music played in morning, noon, and evening.

Types of music in regard to station F.M., A.M., country, rock.

Play different records and let students place according to time of day.

Visit a station.

Resources and Materials:

Contemporary records

Mood records

Evaluation:

Comments on use:

Jim Walk

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students shall be aware of the job opportunities in areas of stage and dance bands.

Procedure:

Orientation on stage bands.

Make up of instruments required.

Music and styles of stage band.

Students will make up their own band.

Resources and Materials:

Career Opportunities in Music,
American Music, 332 S.
Michigan Avenue, Chicago, IL
60604

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students shall become aware of qualifications for a music teacher.

Procedure:

Students write to state department of education for state requirements for degree.

Write to college or university for that school's program in music.

Spend a day with a college student majoring in music.

Spend a day with a teacher in the classroom on music.

Resources and Materials

Band Director's Guide
State curriculum guides
Teacher's manuals
Fundamentals of Conducting

Evaluation:

Comments on use:

Objective(s):

Students shall become aware of the fine arts, their interaction and their affect on society.

Procedure:

Make a bulletin board on the "Arts" - related jobs.

Student makes a career chart depicting jobs in art, music, and English.

Each student selects activities relating to jobs in these areas.

Example--Listen to music "An American in Paris" (Gershwin).
Draw pictures of scenes depicted.
Write story or poem about the activities in the recording.

Resources and Materials:

Wonderful World of Music,
Doubleday, 1956

This Is an Orchestra, Broughton,
1950

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students will become aware of music and its affect upon employees and their work, patience, etc.

Procedure:

Research and report which industries "pipe in" music into their working areas.

Interview employees and get their opinion of music being played.

Have students list places from own experiences that have utilized piped-in music.

Resources and Materials:

Factories

Motels

Retail businesses

Restaurants

Dentists

Evaluation:

Comments on use:

203

Subject Area(s) Music

Unit(s) _____

Objective(s):

Exploring science of sound (acoustics) in relation to music.

Procedure:

Orientation on pitches, wave lengths, speed of sound.

Have an announcer or D. J. visit classroom. Talk about wave length and how equipment for broadcasting is used.

Visit a radio station.

Experiments in classroom to measure wave lengths.

Take a long bottle, two feet in length, open at both ends, through that extend a thin metal rod. Place sawdust or sand in bottom of bottle. Cork both ends. Vibrate the rod by simply placing hand on bottle and hit end of rod. Count the indentations in the sawdust. Check with science teacher for formula for measuring wave length.

Resources and Materials:

Tuning forks

Various pieces of equipment relating to chemistry
Formulas on measurement of wave lengths

KDRO Radio, Sedalia

Yates Broadcasting (KSIS),
Sedalia

KOMO-KMFL, Marshall

Long bottles, open at both
ends, 2 corks, sawdust and
long metal rod

The Science of Sound, Bell

Telephone Labs, Inc.,

Folkways Records & Serv. Corp.

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students shall become aware of different jobs which are illustrated in music.

Procedure:

Sing songs about different occupations.

Discuss history and geography relationships to the songs.

Games, role playing, acting out songs, guessing jobs.

Resources and Materials:

"Erie Canal"

"Casey Jones"

"Arkansas Traveler"

"I've Been Working on the Railroad"
etc.

Evaluation:

Comments on user:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students shall be aware of the business world concerning music employees.

Procedure:

Contact area music stores for acceptance of individual students for one day or a few hours to work in the store or simply to observe.

Could make calls to purchaser on an order which has arrived or to make collection on overdue bills.

Make deliveries--pianos, etc.

Demonstrate instruments to customers.

Resources and Materials

Wilken Music

Shaw Music

Ike Martin Music

Mike Rock's Music

Demonstration ability required

Evaluation:

Comments on user:

Wilken's has students, college and high school level, who actually sell and give lessons at the store.

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students will be exposed to occupations in vocal music.

Procedure:

Have a professional visit the class.

Students research and report on hiring operatic or popular singers.

Students will discuss voice qualities, appealing or otherwise.

Record each student's voice; play back for class and guess "Who's Who in the Tape Recorder."

Research requirements of a music degree.

Resources and Materials:

Jobs in the Performing Arts,
Chicago: Science Research
Associates, 1966

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students shall become aware of different music for different professions.

Procedure:

Discuss music of various organizations, e.g.
church music, funeral music, circus and march
music, patriotic music.

Resources and Materials

Star Spangled Banner
Old Rugged Cross
Beyond the Sunset
Stand By March from movie--
Greatest Show on Earth

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students will become aware of music activities in their leisure time.

Procedure:

Have students keep a tally of every time they hear music during a day or week.

Each student will present a piece of music (record, etc.) depicting their leisure time music interests.

Make up a musical skit choosing background music in which the title words carry out the mood to be depicted. The songs chosen would have to be easily recognized by other participants and audience.

Resources and Materials:

Records of mood music
1001 Songs from Reader's Digest

Dance Careers for Men and Women, A. A. for H. & P. E. and R., 1201 16th St., N.W., Washington, DC 20036

Evaluation:

Comments on use:

Subject Area(s) Music

Unit(s) Instruments of Orchestra--Care
and Repair

Objective(s): Ability of students in band to do minor repair on their instruments.

Procedure:

Orientation to families of instruments, sight by pictures and handling and playing.

Discussion of care and repair.

Repairman to visit class.

Disassemble an instrument. Reassemble an instrument.

Place a simple problem in the horn. Have a student find the damage.

Resources and Materials:

Band Director's Guide
Instruments

Repair and maintenance kits
Lists of costs for repairs
of particular work (glazing,
refinishing, dent removal,
repadding)--Leblanc

Evaluation: Visit a factory if available.

Comments on use:

Subject Area(s) Music

Unit(s) _____

Objective(s):

Students will become aware and research various occupations in music careers, or hobby areas.

Procedure:

Student will chart at least ten career areas relating to music, e.g. piano teacher, orchestra leader, etc.

The students will team up and play the game of "What's My Line" and select a musical occupation to demonstrate while opposition guesses.

Students will select an occupation and study a person who has excelled in this area.

Students will research the salaries of musicians.

Have the students fill out a teacher-made q-sort to better understand their interest in music.

Resources and Materials:

Children's Dictionary of Occupations

Counselor Films, Inc., 2100 Locust St., Philadelphia, PA 19103

Occupational Outlook Handbook, U. S. Dept. of Labor, Washington, DC

Brochure of M.T.N.A., M.E.N.C., and N.A.S.M., 10c each, 2209 Career Tower, Cincinnati, OH 45202

Kuder Form DD Occupational Interest 11-Adult Survey
SRA - Science Research Associates, 259 Research Associates Inc., Chicago, IL 60611

Evaluation:

Comments on use:

MUSIC Q - SORT

NAME _____

1. What are your plans for when you get out of high school? _____

2. Are you interested in music as a hobby or as a possible career? _____

Hobby

Career

3. List all the jobs and careers in music that you can think of. In the space at the right, check that that you would like to know more about.

_____ ()

_____ ()

_____ ()

_____ ()

_____ ()

_____ ()

_____ ()

_____ ()

4. What can you learn in music class that will help prepare you for a possible career in music or some related field?

5. What type of music do you like best?

6. What is your favorite song?

Subject Area(s) Science

Unit(s) Genetics

Objective(s): To teach the student laboratory procedures which they might be required to perform in a career within the medical field.

Procedure:

The student will lance his/her own finger and determine blood type, clotting time and hemoglobin count. When the class has finished, we will consider the class to be a gene pool and compare them to the national average.

Resources and Materials:

Anti A and anti B
Blank microscope slides
Hemoglobin charts
Blood lances
Alcohol

Evaluation: It has always worked well and stimulated class interest in genetics.

Comments on use: Make sure that you have signed parental permission slips before doing the lab.

Objective(s): For each pupil to know about electrical circuits and their practical applications.

Procedure:

Discuss with the pupils ways in which electricity may be used in the home.

Show the pupils parallel circuits used in wiring a home.

Show students series circuits and discuss their importance.

This is used to develop a career in building trades of wiring homes and commercial buildings.

Resources and Materials:

Parallel and series circuit boards

Have a local electrician talk to the class about home wiring and electrical circuits

Evaluation: Have pupils draw both series and parallel circuits and explain their uses. Pupils could draw in the circuits used in an average home.

Comments on use: This activity would depend on the ability of the local speaker used to help with the program.

Subject Area(s) Science or Ecology

Unit(s) Conservation

Objective(s): To determine the shade value of a tree as compared to its actual value for lumber.

Procedure:

The International Shade Tree Conference and the National Arborist's Association say a shade tree is worth \$9 per square inch of trunk diameter as measured 4 1/2 feet above the ground. This is figured by determining the diameter, squaring this figure, multiplying by 0.7854, and then multiplying by \$9.

The lumberman is concerned with board feet. For this, you need the diameter of the tree 4 1/2 feet above the ground and then determine how many times the trunk can be cut into 8 ft. lengths. This can be done by triangulation or by having a student stand next to the tree and reaching as high as possible, which is about 8 ft. and then guessing at the height. This is then checked on the board foot chart, and the number of board feet is multiplied by 20c.

Resources and Materials:

Meter stick
Heavy string 6 ft. long
Conversion chart for determining board feet

Evaluation:

Comments on use: Can be used to show jobs in forestry and some of the jobs they perform. Can be used to stimulate interest in learning different types of local trees.

Subject Area(s) Ecology or Science

Unit(s) Erosion, Soil Types, Conservation

Objective(s): To show that compaction of soil results in decreased absorption of water, therefore, causing water run off.

Procedure:

Use a magic marker to mark the cans one inch from the bottom. Select four different areas around or on the school grounds which receive different levels of student use. Push the cans into the soil to the premarked line, pour 250 ml of water into each can and time how long is required for the water to be absorbed. The absorption time is directly related to how compact the soil is.

Resources and Materials:

4 small cans of the same size with both ends cut out
250 ml beakers
1 gallon plastic jugs
Watch with a second hand
Magic marker

Evaluation:

Comments on use: This shows: (1) The adverse effect of soil compaction which results in erosion; (2) How to determine if a septic tank would work well; (3) Why put cattle or horses in a wood lot cuts down on forests production.

Subject Area(s) Earth Science

Unit(s) Minerals

Objective(s): To develop a knowledge of different properties used to identify minerals. To be able to identify minerals that are found locally.

Procedure:

Give pupils ten different minerals and have them to group them in any way they can.

Discuss the above groups and arrive at the best way to identify minerals.

Give the pupils a number of minerals or rocks found locally and have them identify each using the properties discovered in the above activities.

Discuss the importance of mineral identification to both mining and agriculture.

Resources and Materials:

A good selection of minerals for identity from Wards Scientific. Have a local geologist or agri-fertilizer salesman speak to class on the economic importance of minerals.

Evaluation: Give the pupils a group of mineral specimens for identification. Each pupil should be able to write a paper discussing the economic importance of the rocks and minerals found locally. Lime quarries--or gravel pits or the possibility of undiscovered minerals of importance.

Comments on use: This will give the pupils some insight on the local importance of rocks and minerals.

Objective(s):

To show that an alcohol and an acid can be combined to produce an ester. To make the ester methyl salicylate.

Procedure:

Have students weigh out grams of salicylic acid and mix with ml of methyl alcohol. Then measure ml of concentrated sulfuric acid to be used as a catalyst and add to the previous mixture. The odor of methyl salicylate (wintergreen) will then be evident.

This type of reaction would be very important to organic chemist, chemical manufacturers, among others.

Resources and Materials:

Test tubes, balance sulfuric acid, methyl alcohol and salicylic acid

Evaluation:

Write equations for the reactions of alcohols and acids.

Comments on use:

A quick, easy experiment to do.

Subject Area(s) Chemistry

Unit(s) Solutions

Objective(s):

To have students become aware of the different ways solution may be designated.

Procedure:

Explain to the students the different ways solution strengths are designated and how they are prepared.

Have the students prepare solutions of different concentrations.

Discuss the different occupational areas in which preparation of solutions of given concentrations are important; for example, pharmacologist, chemists, and physicians among many others.

Resources and Materials:

Beakers, scales, graduated cylinder and appropriate chemicals to make different solutions

Evaluation:

Give a test on solutions and how they are prepared.

Comments on use:

Subject Area(s) Chemistry

Unit(s) Chemical Reactions

Objective(s):

To show students that the total mass of reactants are equal to the total mass of products in chemical reactions.

Procedure:

Have the students put some potassium chromate in a test tube and some lead nitrate in an Erlenmeyer flask. Place the test tube in the flask and stopper the flask. Weigh the stoppered flask. Invert the flask. This combines the reactants and a reaction takes place. Explain why a reaction has taken place. Now have the students again weigh the stoppered flask to show no loss or gain of mass.

Important in any career in which chemistry is involved.

Resources and Materials:

Flask, test tube, balance, rubber stopper, lead nitrate and potassium chromate solutions

Evaluation:

Comments on user:

This lab shows the concept of conservation of mass in chemical reactions very well.

Subject Area(s) Chemistry

Unit(s) Properties of Substances

Objective(s):

To have students find the densities of different solids and liquids.

Procedure:

Explain density and how it can be found.

Have students measure volume of solids by water displacement, and the mass by using an equal-arm balance.

The density of liquids are to be found by using density bottles.

Discuss the different occupations in which the finding of densities would be important, for example, analytical chemist and lab technicians.

Resources and Materials

Different liquids to find the density of such as alcohol and acetone

Different solids to find the density of such as different metals or woods

Other materials needed are balances, density bottles, water and beakers

Evaluation:

Have students solve density problems.

Comments on use:

Subject Area(s) Chemistry

Unit(s) Solutions

Objective(s): To have students gain experience in separating the components of a solution by distillation. Have students learn terms that are concerned with distillation. Have students become aware of the importance of distillation in many occupational areas.

Procedure:

Have students assemble several different distillation setups. Then have students use their setup to actually separate different solutions by distillation.

Discuss the different kinds of occupations that may involve a distillation process -- for example, the importance of distillation in an oil refinery.

Resources and Materials:

Distillation materials
Different solutions to be separated
Film loops on distillation

Evaluation: Give short test on distillation terms.

Comments on use: The students usually gain much more by actually being able to do and see the distillation themselves.

Subject Area(s) Physics

Unit(s) Velocity

Objective(s):

To find the velocity, height and angle of projectory of a thrown baseball.

Procedure:

The students are taken outside to measure the distance a baseball is thrown and to measure the time of flight to the best of their abilities. Then using velocity formulas, the velocity, height and angle of projectory can be calculated.

Illustration

Discuss careers which would involve using velocity and projectories.

Resources and Materials.

Baseball, tape measure, stop watch

Evaluation:

Give test on projectory problems.

Comments on use:

Subject Area(s) American History

Unit(s) Politics or Candidates

Objective(s): To help students understand realistically the issues of the period of American History that is being studied.

Procedure:

In any unit, discuss the political elections (ex. Civil War period, progressive era, depression era, etc.)

Choose 2 people to role play the two Presidential candidates. Have them make speeches for their respective parties and platforms.

Conduct the campaign in the class with class members dividing into political parties of their own choosing.

Hold the election.

Compare class results with actual historical results.

Ask class to write paper explaining why they voted as they did.

Resources and Material:

American History text

Research materials on that period of time

Evaluation: By logistics of their thought processes as recorded on the paper telling why they chose that party and that candidate--also how their decisions could have affected history.

Comments on use:

Subject Area(s) Social Studies

Unit(s) Civics--State Government

Objective(s): The student will be familiar with the process of state government and be able to understand the steps in which a bill becomes a law.

Procedure:

Read and discuss in class the unit explaining state government.

Mock General Assembly:

Students divide into House of Representatives and Senate.

Elect Speaker and President Pro Temp.

Divide into political parties.

Election of minority and majority leaders.

Appointment to committees.

Introduction and passage of legislation (they propose it, etc.)

Final assembly of both houses to discuss achievements.

Written evaluation on student's part.

Resources and Materials:

Textbook

Evaluation: Test over the unit (objective); graded homework; bonus points for effort during the mock General Assembly.

Comments on use: I have used this in past classes and found the students are very cooperative and enthusiastic in being able to actually become involved in the legislative process. They have even filibustered in the Senate. Overall, it reinforces the process of the path a bill must take before it becomes a law (on the state level)--which also (as a by-product) enforces the national legislative process.

Subject Area(s) Civics

Unit(s) Court Systems

Objective(s): To let students see court procedures and have a very elementary understanding of how the court works.

Procedure:

Study unit in text on courts and law.

Choose class members to play roles:

- judge
- criminal
- lawyers
- witnesses
- recording secretary
- bailliff

Remainder of the class is jury.

Conduct trial based on supposed crime.

Example: robbery

Have jury make decision.

Discuss the events that took place.

Resources and Material :

Evaluation: There will be no formal evaluation--only class participation and discussion. This is used to illustrate the system through which they operate--the instructor will have to carefully watch to make sure all procedures are fairly authentic. What I want to achieve in this unit is for students to become acquainted with court room procedures.

Comments on use:

Subject Area(s) Contemporary Issues

Unit(s) Drugs

Objective(s): Student will understand drug categories and their effects and the existing laws for each category.

Procedure:

Lecture defining and explaining categories of drugs:

- a. depressants
- b. stimulants
- c. hallucinogens
- d. hard narcotics
- e. misc.

Explain existing drug laws, federal and state.

Hand out sheets (past histories of drug cases from various magazines--have students play case worker to help or explain the problems in these cases).

Survey--conducted on drug usage and possible legalization of drugs.

Panel discussions--possible legalization of each of the above categories.

Music--play drug culture songs: "White Rabbit," "Lover in the Sky," etc. Discuss how this influenced groups.

Resources and Materials.

Mo. State Council on Drugs
Dial a Drug, Dial a Drink (posters)
Drugs A to Z (book)
Drug pamphlets for student use

Evaluation: Test over drug categories and drug laws.

Comments on use: Effective if material merely presented, no value judgments on the part of the teacher, simply know what drugs are and the laws pertaining to them.

Objective(s): Student will learn how to budget money.

Procedure:

Study the unit on consumer problems.

Students are instructed to write the job they want to have for their career--the gross income, the size of their family, etc.

Then they compute (using tax tables) their net monthly income and from that figure (again, stating family size) project a realistic budget--see chart.

	Jan	Feb	March	April	May	June	July
Food							
Clothes							
House							
Utilities							
Auto							
Auto upkeep							
TOTALS							

	Aug	Sept	Oct	Nov	Dec	Total
Food						
Clothes						
House						
Utilities						
Auto						
Auto upkeep						
TOTALS						

Resources and Materials:

Problems of democracy

Pamphlets on jobs or interviews with people in that field

Evaluation: Evaluation is given on the basis of a completed project and a realistic outlook on occupation and salary.

Comments on use: Students seem to enjoy "spending" their money before they earn it and never cease to be amazed at how quickly it disappears.

Subject Area(s) Contemporary Issues

Unit(s) Consumerism

Objective(s): Student will be able to watch or compare the rate of inflation or lack of change in economy.

Procedure:

Give students a list of products.

Example: flour, sirloin steak, chicken, shampoo, deodorant, etc.

They will then proceed to put their own favorite brand names and sizes to each product.

Over a period of 7 months, they are to go to the same store, looking for the same products and write the price changes over a period of months--one trip a month.

Resources and Materials:

Grocery stores

Evaluation: Grade will be given on completeness of charts over the allotted time. Point system based on a number of comparisons.

Comments on use: Students learn to compare prices if they use two or more stores each month, they also learn the cost of living increase we have been experiencing and finally they learn how to keep track of something (their assignment) over a period of time.

Subject Area(s) Contemporary Issues

Unit(s) Consumerism

Objective(s): Student will be able to watch or compare the rate of inflation or lack of change in economy.

Procedure:

Give students a list of projects--example, flour, sirloin steak, chicken, shampoo, deodorant, etc.

They will then proceed to put their own favorite brand names and sizes to each product.

Over a period of 7 months, they are to go to the same store, looking for the same products, and write the price, making a chart, showing price changes over a period of months--one trip a month.

Resources and Materials:

Grocery stores

Evaluation: Grade will be given on completeness of charts over the allotted time. Point system based on a number of comparisons.

Comments on use: Students learn to compare prices; if they use two or more stores each month, they also learn the cost of living increase we have been experiencing and finally they learn how to keep track of something (their assignment) over a period of time.

Objective(s): Student will learn the techniques of surveys and whether or not surveys can always be effective or impartial.

Procedure:

Read unit in book on techniques and purpose of surveys.

Allow student to decide upon a topic in which he is interested that pertains to America.

Have him formulate questions and type survey. Give survey and formulate results (prejudice, popular songs, autos, issue in the community, etc.)

Present results in class.

Type a sheet with all survey results and hand out copies.

Resources and Materials:

Textbook

Masters and paper

Masters and paper

Evaluation: It was evaluated on appearance (how well typed, etc.)--the number of people interviewed, pertinence of topic and how results were tabulated.

Comments on use: I used this method with ten sociology students. It was extremely successful--each had a different topic. They learned more about their particular interest area, as well as reinforcing the unit in the book on how to sway the public and how surveys are not always a legitimate means of finding answers (anyone can predetermine the outcome of a survey). These surveys were to some extent professional in that they were typed and run off for effectiveness.

Objective(s): To allow students time to explore the various occupational choices available to them upon graduation from high school, including nature of work, preparation, experience, duties, importance of work to society, etc.

Procedure:

Provide students with a list of objectives of the unit.

Provide students with list of various sources of information available to them in their exploration.

Provide an assignment dealing with three job investigations. Explanation: Students will choose three jobs of particular interest to them, then using the resources available, explore these occupations and report on them (outline provided as a guide for completion).

Students to interview five people in a full-time occupation which the student might be interested in going into himself.

Provide a research topic and provide students with the inquiry method directions to complete.

Fill out a proper application blank.

Conduct mock interviews after viewing filmstrips.

Resources and Materials:

Typed print-out detailing instructional objectives

Dictionary of Occupational Titles

Dictionary of Occupational Titles
file

Occupational Outlook Handbook
Careers file (library)

Filmstrips relating to various occupations

Tapes relating to differing occupations

Magazines, books, etc.

Speakers from the community

Guidance counselor

Evaluation: Based on student's ability to relate to another person how one goes about deciding on a wise occupational or vocational choice.

Comments on use: Must keep students busy--provide instructions or guidelines and make sure they are adhered to.

233

FIELD TRIP SITES and GUEST SPEAKERS

NAME	ADDRESS	CONTACT REPRESENTATIVE	TELEPHONE	FIELD TRIP	GROUP SIZE	GRADE LEVEL	GUEST SPEAKER
Accounting	J and S Accounting Warsaw, MO	Ms. Sue Cable	438-7395	No	—	8-12	Yes
